Test Beam and ITA Status

- MTest
 - On standby
 - 24 user groups have requested time.
- MCenter
 - NOvA removed, EMPHATIC being installed.
 - ARCs preparing for installation as well
- ITA
 - First user group approved and ready to install in next 2 weeks
 - Not a full schedule, but steady work for the year

HEPAP Talk in December

FY25 and FY26 Running

- We have many requests for beam for MTest for FY25
 - Failed to provide beam to EDIT school, which is usually a big draw to using our lab as a school site.
 - Mix of CMS/ATLAS/EIC groups in addition to general R&D requests
 - Some users can possibly go to other facilities, but a decision is necessary as soon as possible.
- Will we run in FY26?
 - Any information would be helpful for planning.
- Program Planning help
 - Some users can possibly use different energies, but we need specific timing and low pileup
 - PIP-II construction seems to be farther along than thought.
