

2x2 Data Assessment: Ground Bounce/E-Board Triggers

Angela White
11.20.2024

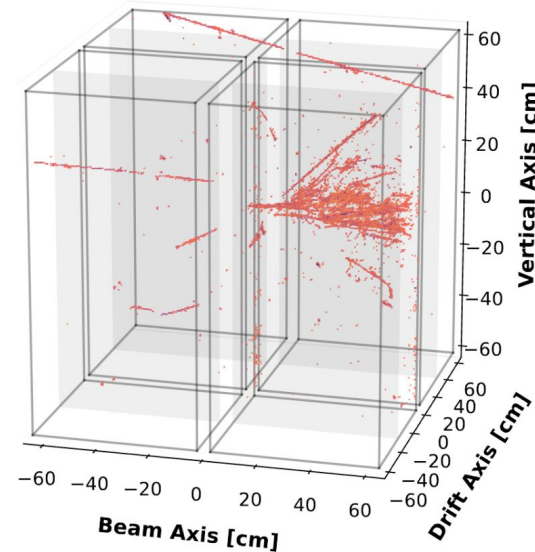

In-Process:

Looking for
lines of
charge at t_0

Run 50017, Subrun 500170000008
Event 4121: 2024-07-08 19:19:27 UTC

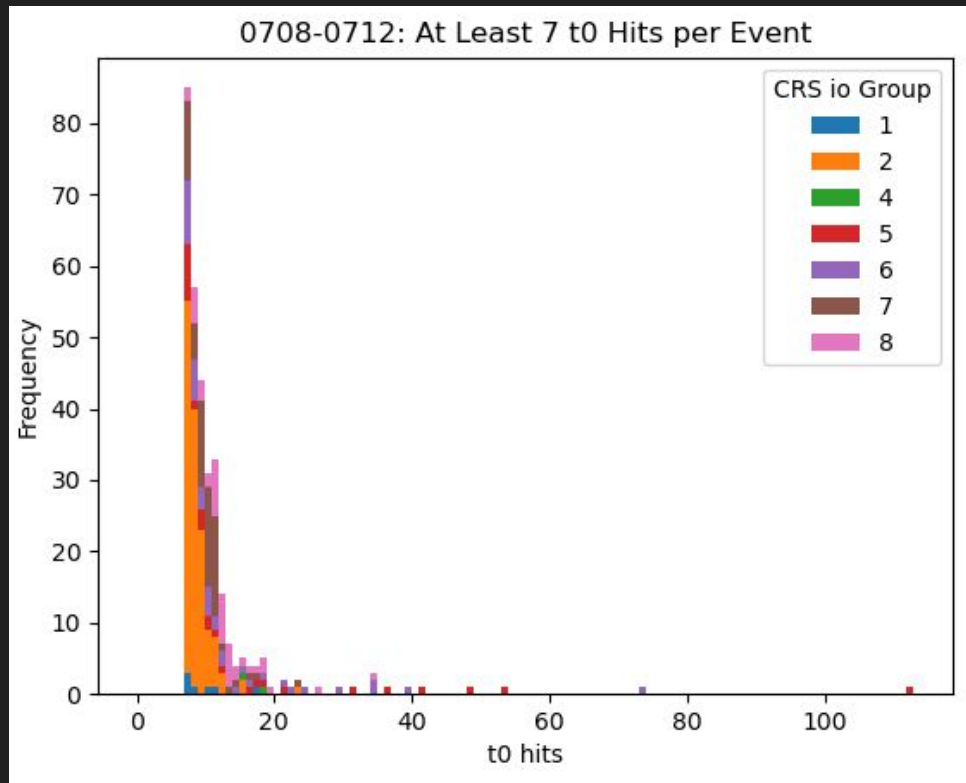

DUNE DEEP UNDERGROUND
NEUTRINO EXPERIMENT

DATA

Ground Bounce:

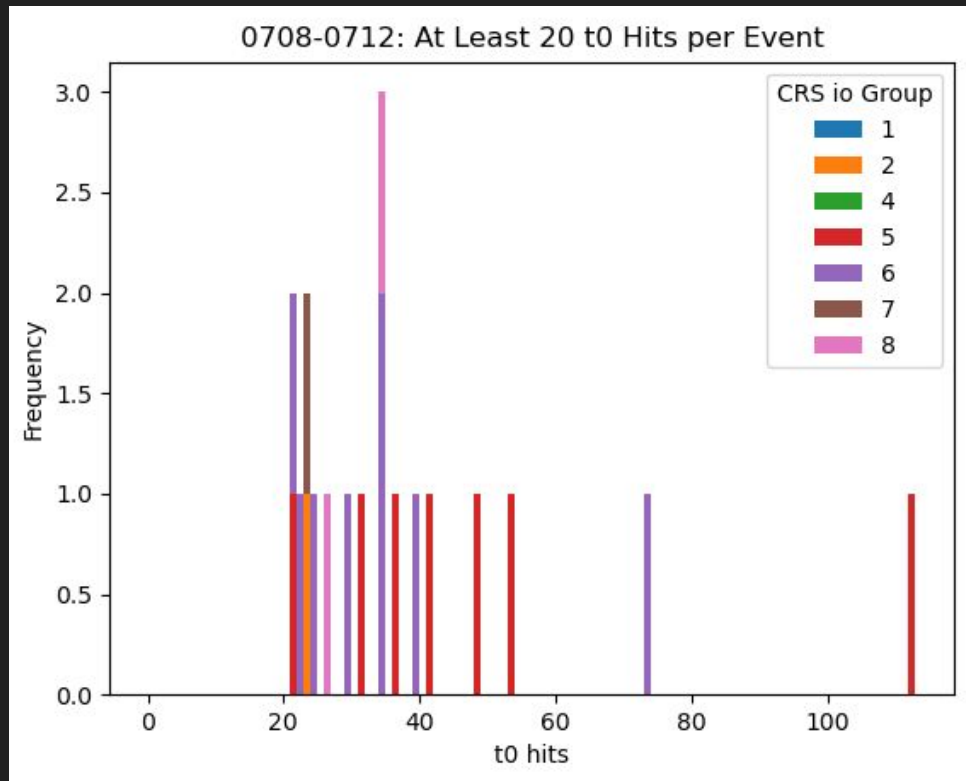

at least 7 hits at t0 in an event:
ran over 300 files (almost all of
nominal run)

Ground Bounce:

at least 7 hits at t0 in an event:
ran over 300 files (almost all of
nominal run)

Question: is # hits at t0 a good
cut?

Ground Bounce:

Answer: No. Hand-scanned Event Selection:

	file_name	timestamp	charge_event	n_t0_hits	io_groups	LRSTPC

Not Every File: Most

Ground Bounce:

Module 2: TPC 4, $\Sigma E = 0.0\text{GeV}$

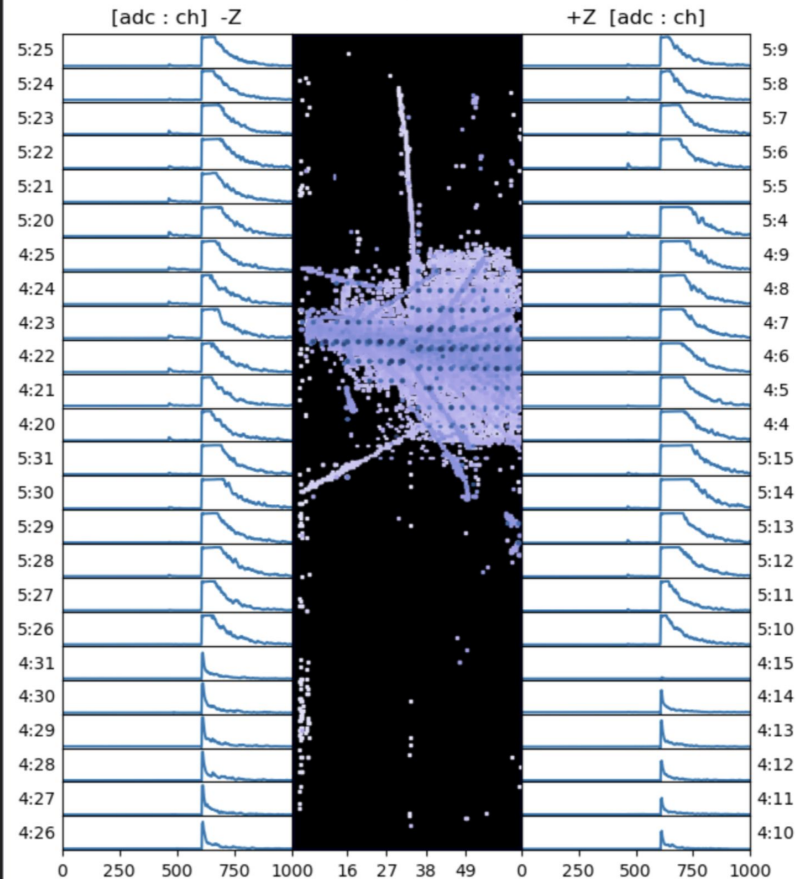

In TPC 5,
can see a
pattern in
light
waveforms:
saturation
across most
channels

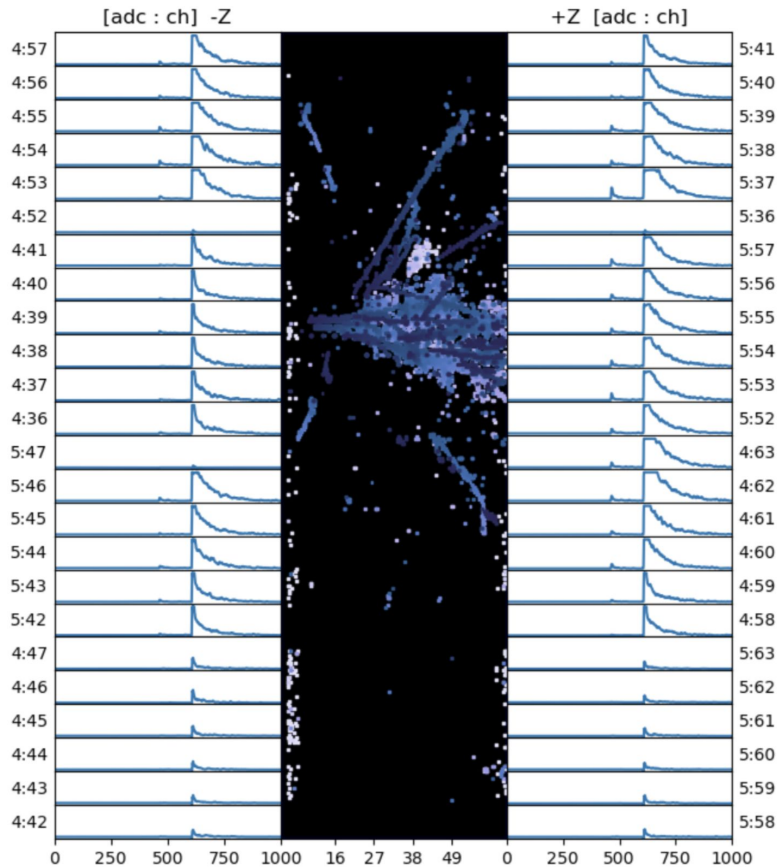

Charge ID:
4111

Light ID:
4728

Module 2: TPC 5, $\Sigma E = 4.086\text{GeV}$

Module 2: TPC 4, $\Sigma E = 2.069\text{GeV}$

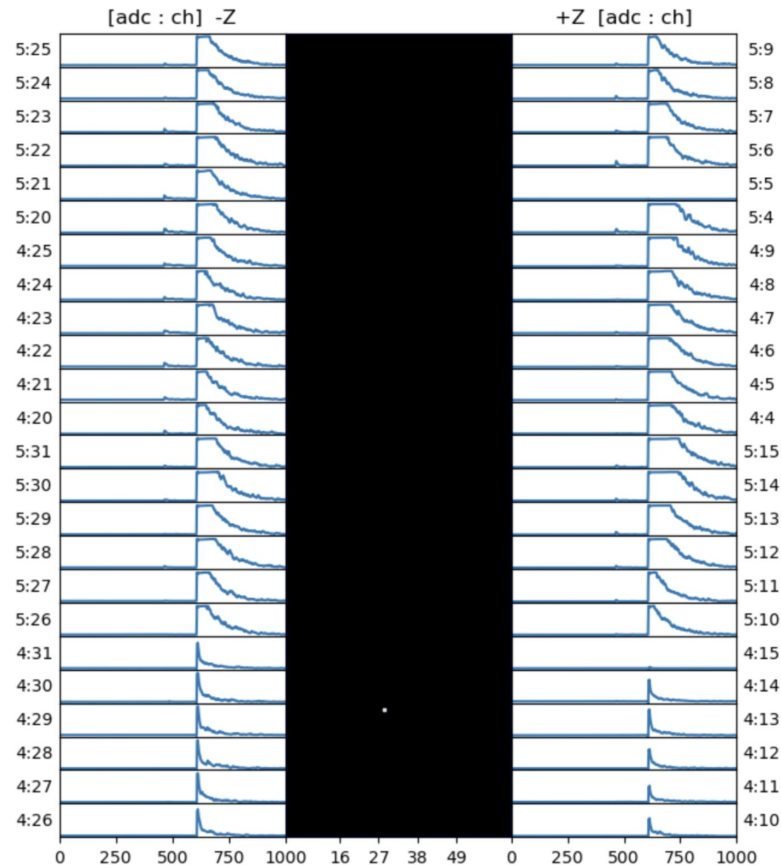

In TPC 4,
can see a
pattern in
light
waveforms:
saturation
across most
channels

Charge ID:
4121

Light ID:
4728

Module 2: TPC 5, $\Sigma E = 0.0\text{GeV}$

Conclusions

No E-Board events after CRS threshold increase

In Progress:

Cutting on 1GeV as a selection (needs to be refined)

Have run cut over 1 FSD file and seen no E-board trigger
