

2x2 Demonstrator Operations Status

Kevin Wood, Luis Zazueta
PMG Meeting
December 12, 2024

Current Status

- The cryostat is empty, ready for leak repairs.
 - Epoxy has been tested and we are optimistic that it would work on the detector.
 - Faulty cryocooler was repaired and is back from the manufacturer.
- We are in the process of assessing beam-off run proposal.
 - If green-lit, would most likely happened some time on the later half of 2025.
- Neutrino beam data is still the main focus of the 2x2.
 - We hope to take NuMI data in FY26.
