

Operations Meeting

Steven Timm

CS+C Jan 6 2025

Announcements

- MySQL/MariaDB upgrade at Fermilab tomorrow 7 Jan between 05:30 and 10:00
- Will lead to ~1 hr outages of VOMS, DUNE DocDB, Dune Mediawiki.
- JustIN was upgraded to 1.02 this morning, OK thus far.
- Appears that WLCG Helpdesk is not operational and we still use GGUS for now
- Discussion—it is proposed to fill in the gap in the landscape compute cycles plot (pre oct. 14) by Andrew dumping the data from the Justin DB

Ops/Data management

- 3478TB of free space
- Working on upgrading declad and ingestd to latest versions
- Plan to clear space for vd-protodune discussed at tomorrow's Data management meeting
- BNL needs to know when to convert the DUNE backend storage, we propose Jan 21
- Jan 2. Complete failure in AWT storage testing due to some metacat datasets for AWT uploads not being there. They are there now.
- Plan to file the service request to start moving 2.5PB of disk at Fermilab from tape-backed to persistent this week.

Running experiments

- NP02 saw some tracks in the lower part of their detector after the partial fill. Power cut at CERN at 06:00-06:30 CERN time Jan 8
