

## Round Table Panel Discussion: What Coordination is Necessary for Planning the Short-Baseline Neutrino Program?

1. What should be the community strategy for addressing the current hints and anomalies possibly associated with sterile neutrinos?
2. In coming up with a global short baseline program, how should the plan treat exploratory versus definitive experiments, duplication in technique and physics, and other types of comparative issues such as cost?
3. How can the worldwide community come together to plan and execute a global shortbaseline program and is this necessary?

Possible final comments: What should be the feedback to ICFA on a SBL program?
