Expansion plans for the Brookhaven computer center

Wednesday, 7 November 2007 09:30 (30 minutes)

Brookhaven is the primary computing center for RHIC, and it is also a Tier 1 computing center for the ATLAS experiment at CERN. The growing computing needs from both RHIC and ATLAS has exceeded the capacity of the current computer center, and a long-term expansion plan is now underway to meet future requirements. This presentation discusses our expansion plans as well as possible strategies that emphasize efficient growth of the computing facility resources.

Approximate Length (in minutes) (default is 15 minutes for Site Reports and 30 minutes for others, including questions)

30 minutes

Primary authors: Dr CHAN, Antonio (Brookhaven National Lab); ERNST, Michael (Brookhaven National Lab)

Presenter: Dr CHAN, Antonio (Brookhaven National Lab)

Session Classification: Data Centers I
