Are there some new service models we can pursue? For what market niche?

- *Back ends for web tools (Galaxy and others)*
- *Back ends for commonly used desktop applications (ArcGIS, R, SAS, and others?)*
- *Data Staging, Storage, Sharing as a service?*
- *Computational services beyond HTC? Large memory? GPU?*
- *Sensitive data (eg., HIPAA) analysis service?*

What research domains/use cases could use OSG?

- *Genomics, proteomics*
- *Neuroimaging? BRAIN Initiative?*
- *Historiography?*
- *Sensor- and geographic-based research such as Agriculture and Parks and Rec (thanks, Barr!)?*
- *Disciplines that are federating due to data sharing requirements or otherwise?*

Partner with ACI-REF on this?
