

G4 macro location

- LArG4.mac is currently installed in the larsim lib directory
 - we didn't have a better option at the time
 - needs to be in FW_SEARCH_PATH
- gdml files also need to be in FW_SEARCH_PATH
 - anything installed with install_gdml is automatically in FW_SEARCH_PATH
- larsim/ups/product_deps
 - gdml_dir product_dir G4 (working name)
- larsim/LArG4/CMakeLists.txt:

```
file(GLOB g4_macros *.mac )  
  
install_gdml( LIST ${g4_macros} )
```

 - (This replaces about 10 lines.)
