

MAP IB Meeting
*Program Updates and Review
Planning*

Mark Palmer
6/18/2014

What do we know?

- Review
 - Scope will cover all of MAP activities
 - Management and technical issues will be reviewed
 - One focus will be MICE construction and exploitation
 - Will involve STFC/RAL/MICE personnel
 - Have received a preliminary planning budget profile for a 3-year conclusion of MICE
 - Proposal for activities for which to initially recolor MAP FY15 budget to GARD
 - MTA R&D effort
 - Advanced concepts for neutrino and cold muon sources
 - Have received confirmation from Jim that we can propose to re-color as a coherent activity that will then fall under the next round of GARD reviews ⇔ ie, provide a coherent ramp-down
 - Note: After a meeting with Don, Marty, and Andy, I would have to say that there appear to be gross misconceptions about how our funding is spent – this could be problematic
 - Review date has slipped somewhat due to many conflicts
 - Week of August 11
 - Likely 3 days duration
 - Probable location: BNL
 - Committee members are not yet designated
- Note – letters to Steve Ritz and Jim Siegrist are generating responses
 - I would recommend that the IB members consider this
 - For instance, Dan Kaplan has already sent a note

Items for IB Support

- Need help preparing for the review:
 - Have been requested to prepare a comprehensive list of publications and proceedings
 - In order to ensure completeness, I would propose to have the IB representatives assemble complete lists for their institutions (including theses) for the period 2010-present
 - I will ask Maura to coordinate a master document
 - For PIs with students and/or post-docs
 - Please send me an updated set of their expected completion schedules
 - Will do my best to preserve the younger members of the team
 - We need a new IB chair to interact with the agencies and committees ASAP
 - What is the likely election schedule?
 - Also, we are moving ahead with a JINST dedicated volume
 - Very supportive
 - Very pragmatic submission rules (append as articles arrive)

Questions

- Would like to ask the board for any thoughts they have on how they would like to interact with the process moving forward.
 - With P5
 - With DOE/NSF
 - With the Accelerator R&D Panel
- Conflicts of Interest concerns?
