What about Physics

This software stuff is nice, but what about the Physics?

The simulation and offline software are tools to achieve results

Evolution to an Offline System

Physics studies

See Hertzog list

See Morse list (TDR page 112)

A Program

Where can new people fit in? Priorities? Ordering?

1) End-to-end Rate Study

- o Receive muons/distributions from G4Beamline**
- o Ensure fields are correct**
- o Ends with tracks and clusters**
- o Measure efficiencies**

2) Calorimeter

- o Need shower library**
- o Understand materials**
- o Accurate waveforms**
- o Cluster finding**
- o Q method**

Physics Program

3) Tracker

- o Pattern recognition
- o Track fitting
- o Momentum, pitch angle, decay position resolutions
- o Rates given pileup, fast rotation and variances
- o Sensitivity to EDM

4) Beam

- o μ^- and μ^+
- o Scraping, lost muons
- o Inflector, kicker, quads, time-dependent fields
- o Optimal scraping
- o Beam dynamic systematics
- o Lost muons

Physics Program

5) Verification

- o Geometry and fields correct?
- o Visualization
- o “Standard candles”
- o Tomography

6) More computing stuff to do

- o Release art 1_11_00, upgrade code accordingly
- o Fix circular dependencies
- o Use SAM, new Jobsub,
- o Restructure fields to allow for non-Geant use
- o Use build facility
- o Write tests
- o Event display

A lot to do

How can you help?

- 1) **Learn Art**
- 2) **Practice best practices**
- 3) **Collaborate freely**
- 4) **Pick a sub-group (calorimeter, tracking, verification) and help**
- 5) **Don't be afraid to ask questions**
