

D0 to KsKK and D to omega pi

Wednesday, 20 May 2015 10:50 (20 minutes)

Based on 2.92 fb^{-1} of e^+e^- collision data taken at $\sqrt{s} = 3.773 \text{ GeV}$ with the BESIII detector at BEPCII, we present preliminary results from the analysis of the decay $D^0 \rightarrow K_S^0 K^+ K^-$. We measure the branching fraction and investigate the rich substructure in the final state by performing a Dalitz plot analysis.
