

An Overview of DESI and the Collaboration Efforts at SIDET

Tuesday, 9 June 2015 09:45 (15 minutes)

Dark Energy Spectroscopic Instrument (DESI) will explore the effect of dark energy on the expansion history of the universe. Fermilab's Detector Research and Development program plays key role in testing and characterizing the CCD sensors which will probe the night sky from Kitt Peak.

Is this an abstract for a New Perspectives presentation?

Yes

Is this an abstract for a Users Meeting Poster?

Yes
