Deploying CS-Studio at DLS

Wednesday, May 20, 2015 8:45 AM (15 minutes)

About one year ago, it was decided to evaluate CS-Studio as a replacement for EDM at Diamond. Since then, much work has gone into making CS-Studio and BOY a viable replacement for the many existing deployed EDM screens without disrupting existing ways of working.

This talk describes the problems and solutions found, including the new work on OPI Shells, and shows how CS-Studio may finally be deployed for both machine and beamline operation at DLS.
