## ITER and CODAC Core System - Status and Road Map

*Tuesday, May 19, 2015 10:15 AM (15 minutes)*

ITER is a large international project building a fusion facility in the South of France. Most contributions are in-kind - integration of more than 200 plant systems will be the main challenge when building the control system.

To support controls development of plant systems, ITER created CODAC Core System (CCS), a Linux Distribution based on RedHat Enterprise Linux, EPICS and ITER specific tools.
