

MicroBooNE Update

June 2016 Fermilab PAC

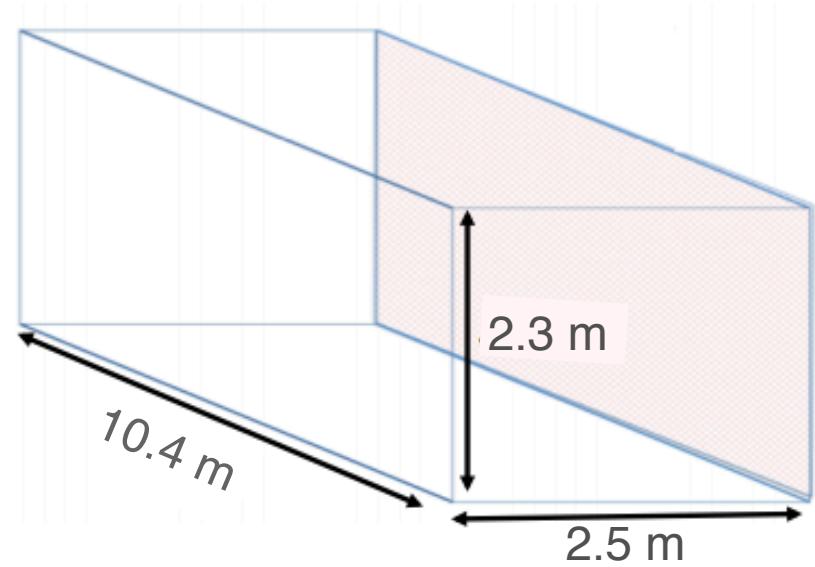

Bonnie Fleming for the MicroBooNE collaboration

COSMIC DATA + RUN 4411 EVENT 57605, January 7 2016, 21:25

MicroBooNE

- LAr TPC (170 tons)
 - non-evacuated argon fill
 - cold (in argon) front-end electronics
 - long drift distance (2.5 m)
 - near surface operation
 - UV laser calibration system

- Goals:
 - address MiniBooNE excess
 - measure the first low energy neutrino-argon cross sections
 - R&D for future detectors (SBN and DUNE)
 - First phase in SBN program

DOE Achievement Award

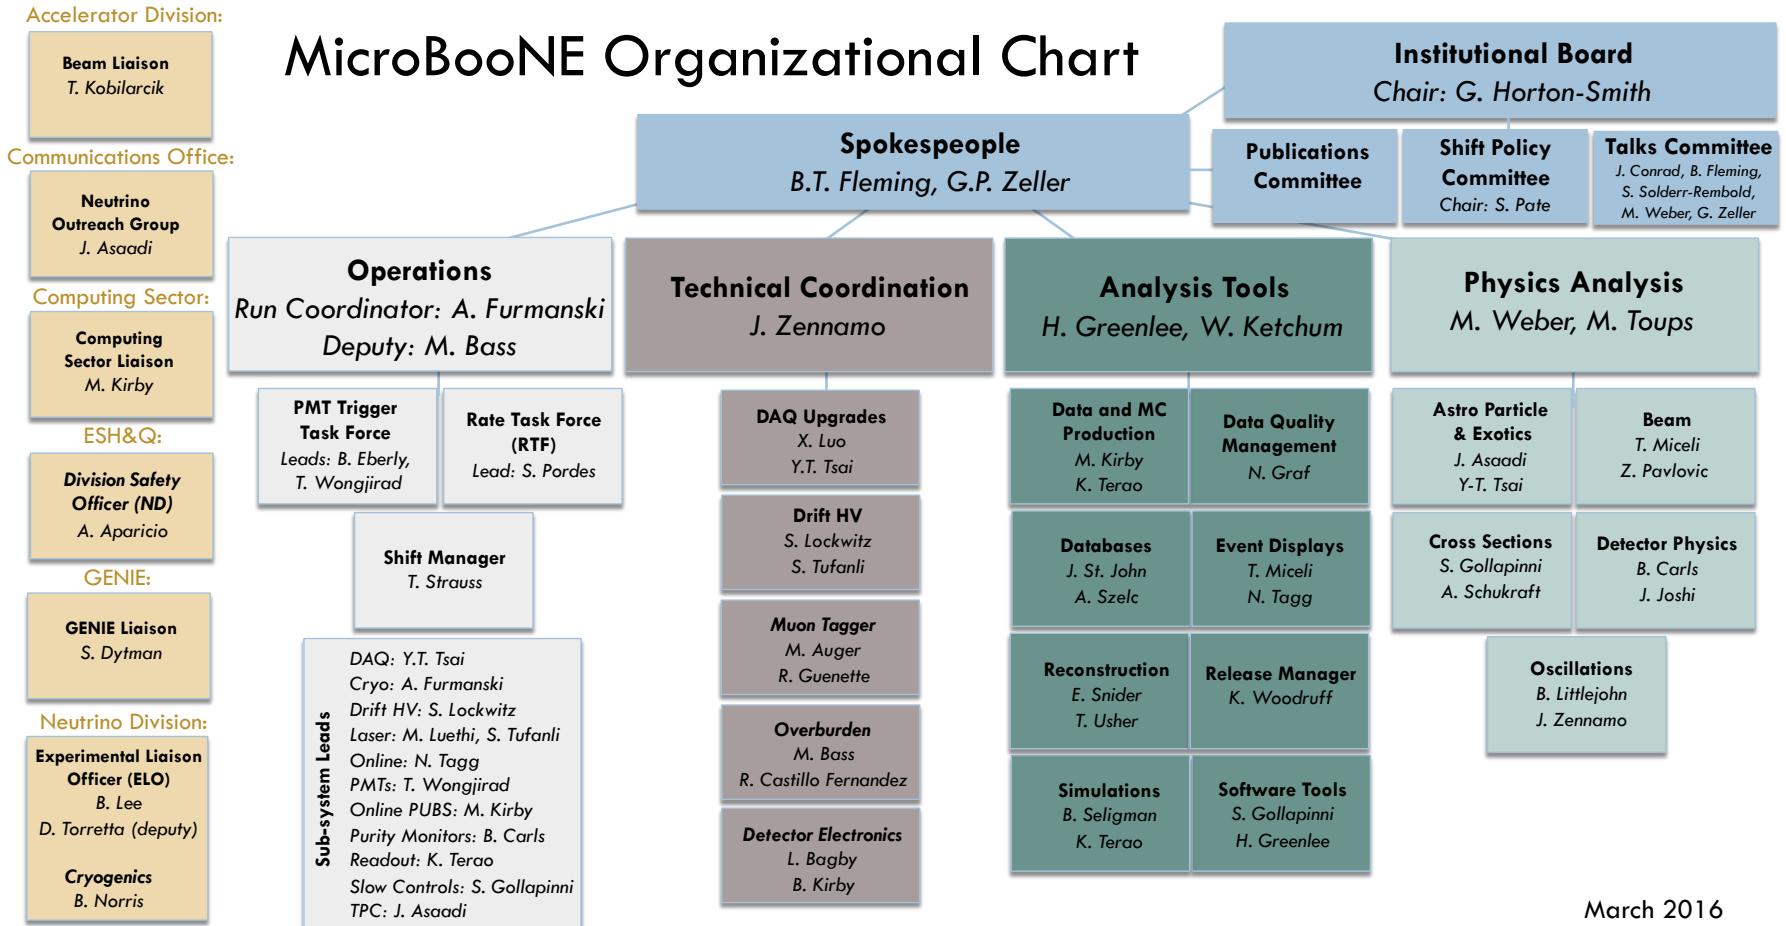

Paul Philp (Federal Project Director, Fermilab Site Office) was awarded a DOE Achievement Award for the successful completion of the MicroBooNE project.
Congratulations to Paul and the MicroBooNE project team!

The plaque reads: "The MicroBooNE project team successfully fabricated a unique, first-of-its-kind 100 ton neutrino detector for the high energy physics program of discovery in neutrino science..."

MicroBooNE year 1 is nearing completion.....

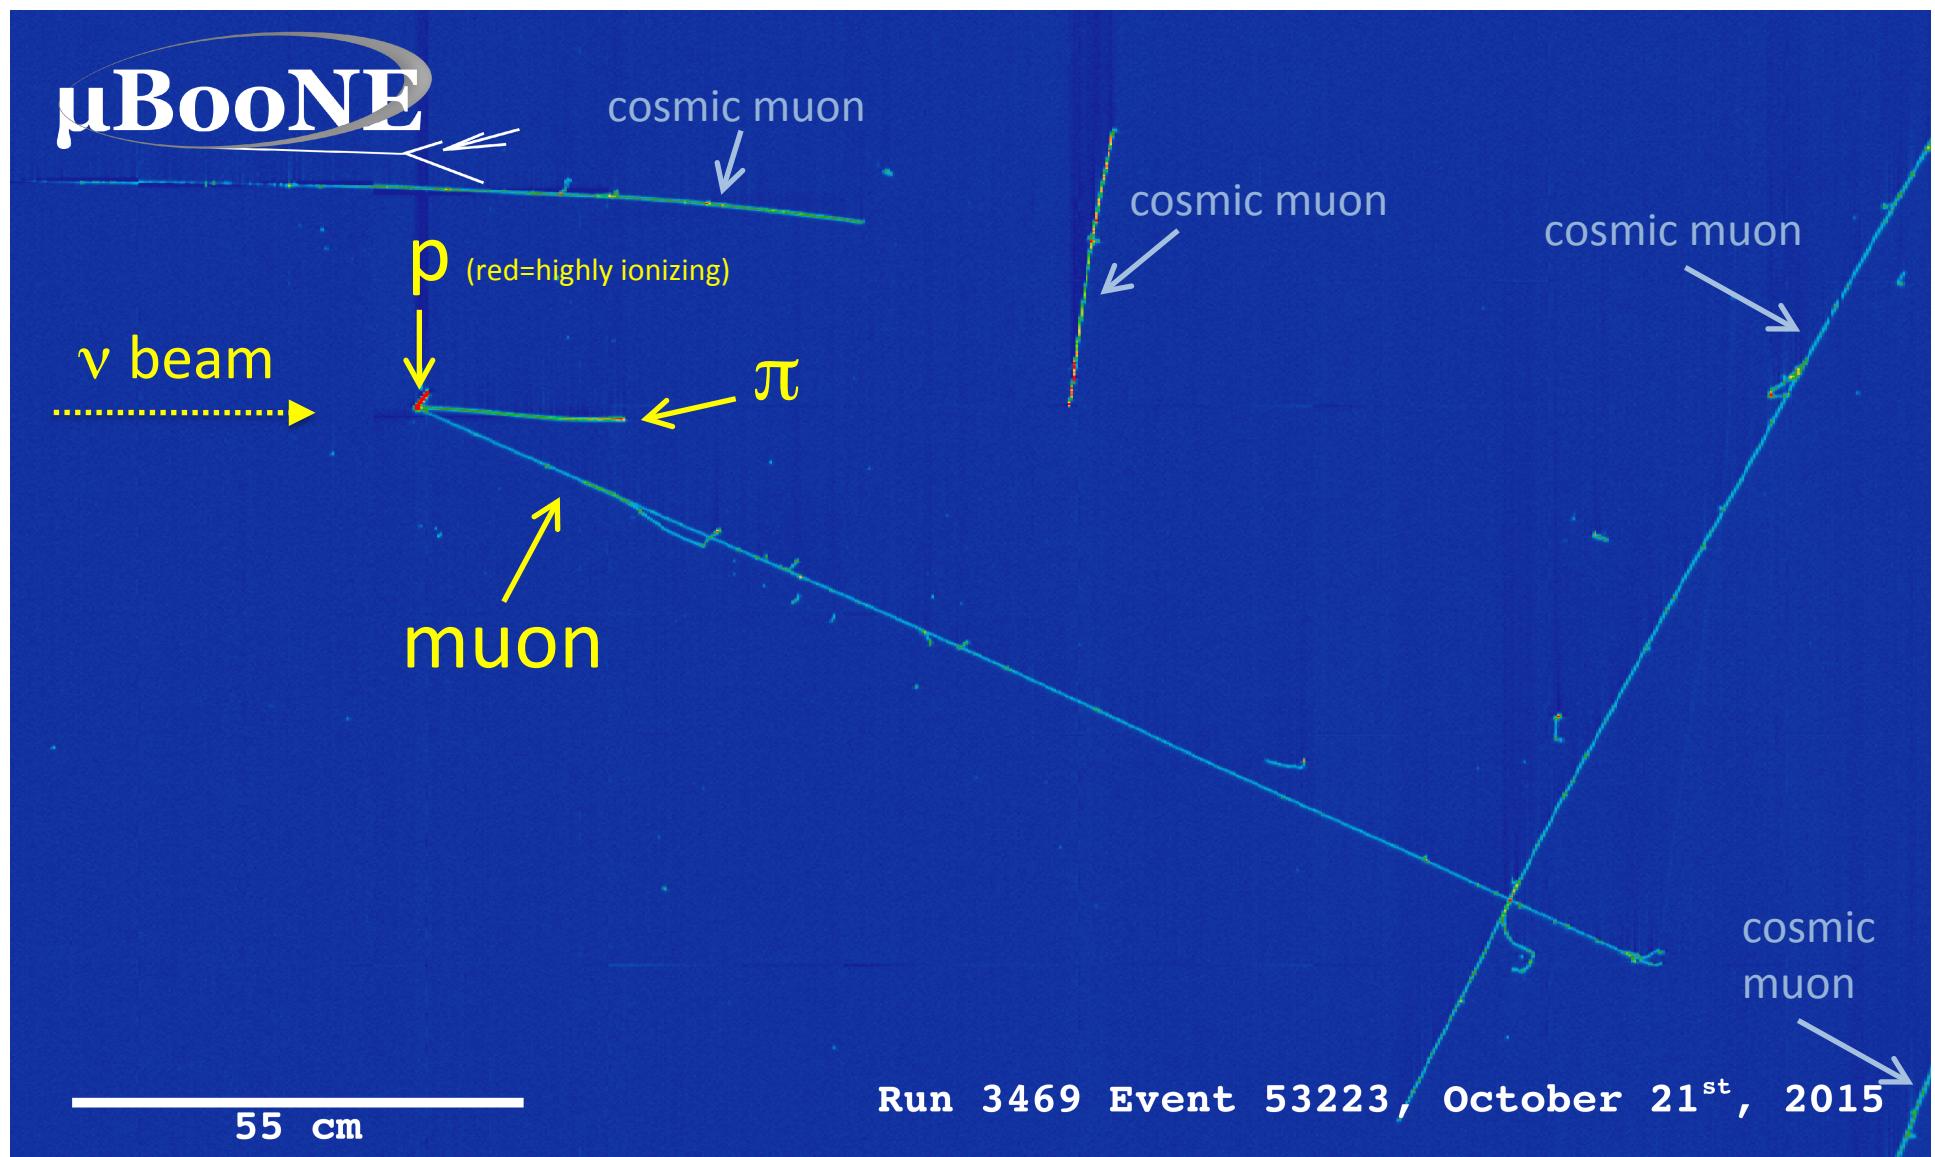

- Operations
- Analysis
- Technical upgrades
- Collaboration

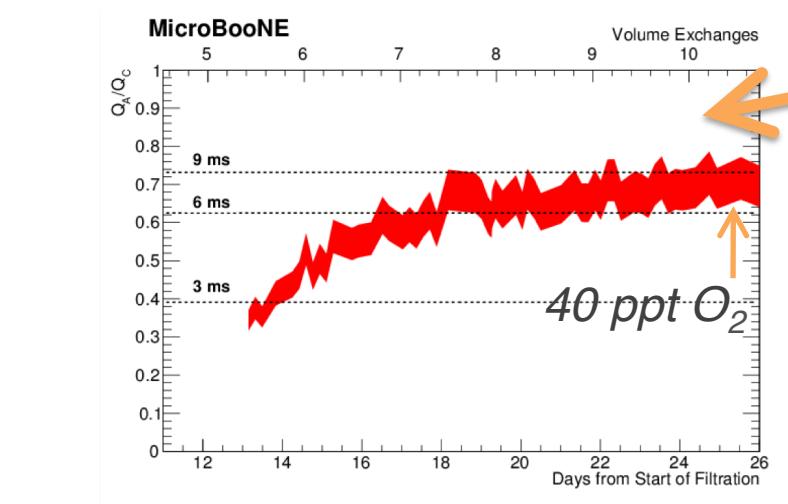

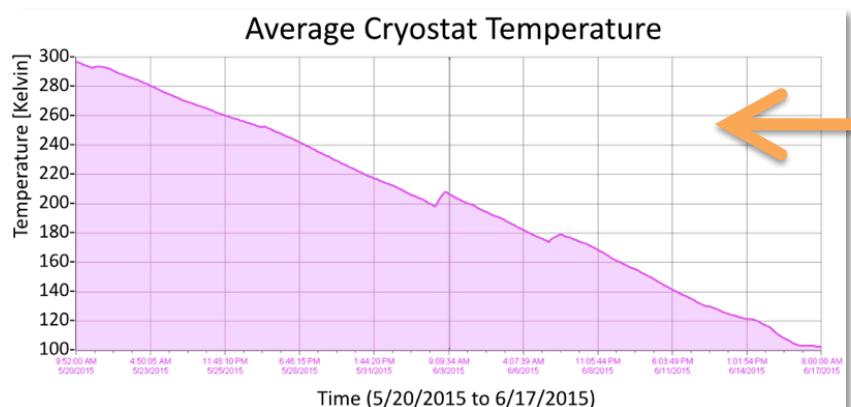

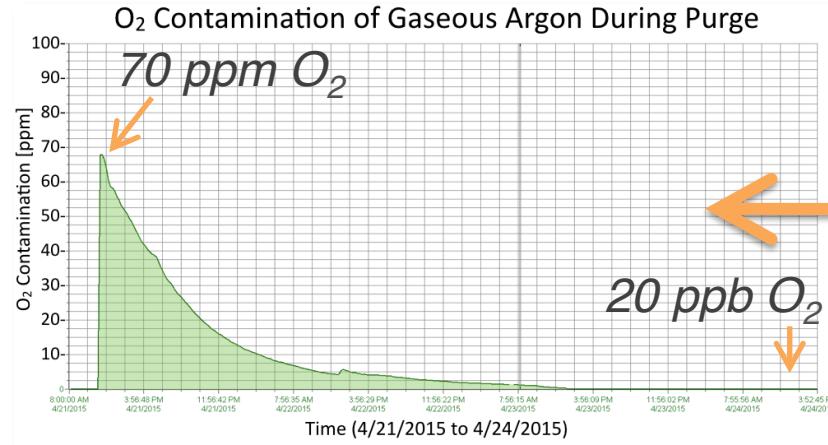

March 2016

MicroBooNE within the SBN program

Start of Operations → First Neutrinos: October 15, 2015

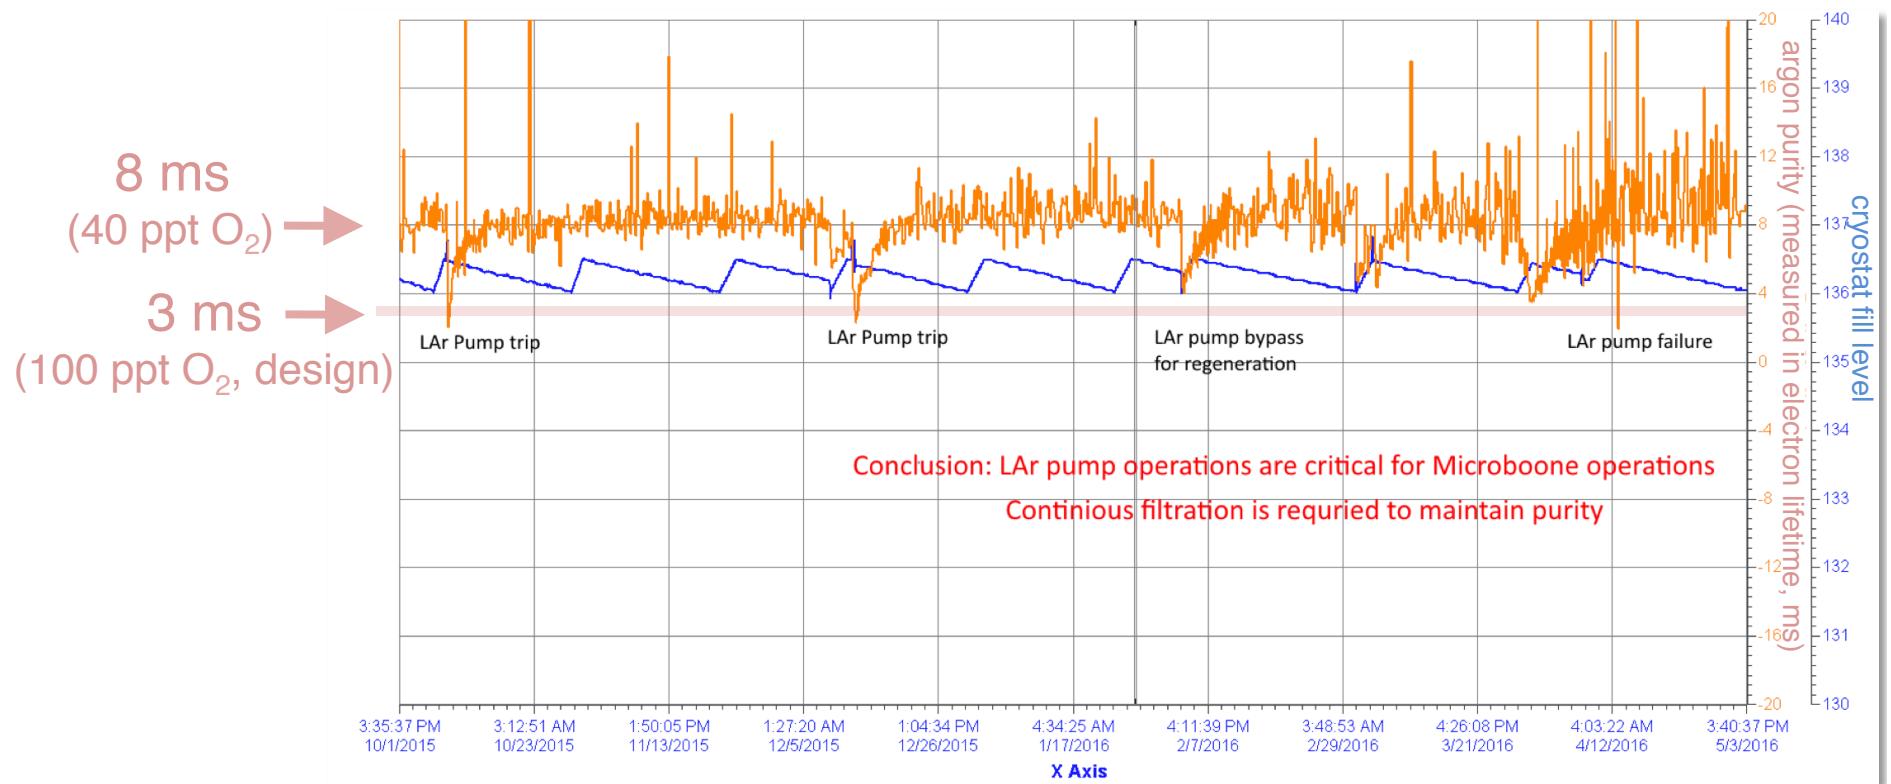

Cryogenics Cool Down and Operations

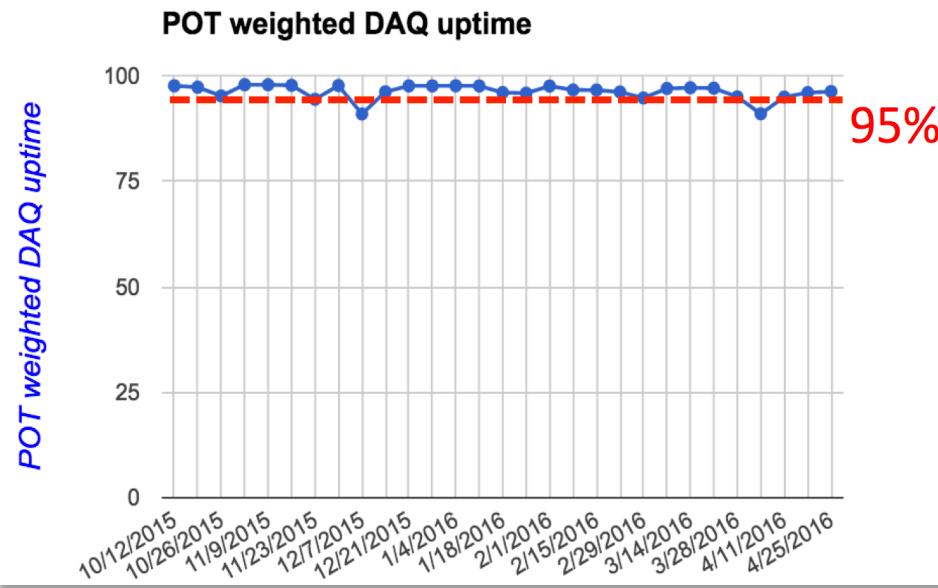

- step 1: purge with gaseous argon
 - *first demonstration of this technique in a fully instrumented physics experiment*
→ vessel evacuation not necessary
- step 2: cool to LAr temperatures
 - *slowly cooldown (~8K/day) for a month*
- step 3: liquid argon fill (**170 tons**)
 - *9 tanker truck loads, 22 days*
- step 4: recirculation and purification
 - *MicroBooNE has been operating stably at > 2-3x design purity*
 - *FNAL cryo staff were critical to this success*

Cryogenics Stability over time

- The performance of the MicroBooNE cryogenics system has been excellent – we maintain an average argon purity that is consistently above design (design = 3 ms electron lifetime = 100 ppt O₂)

MicroBooNE Data Acquisition and storage to tape

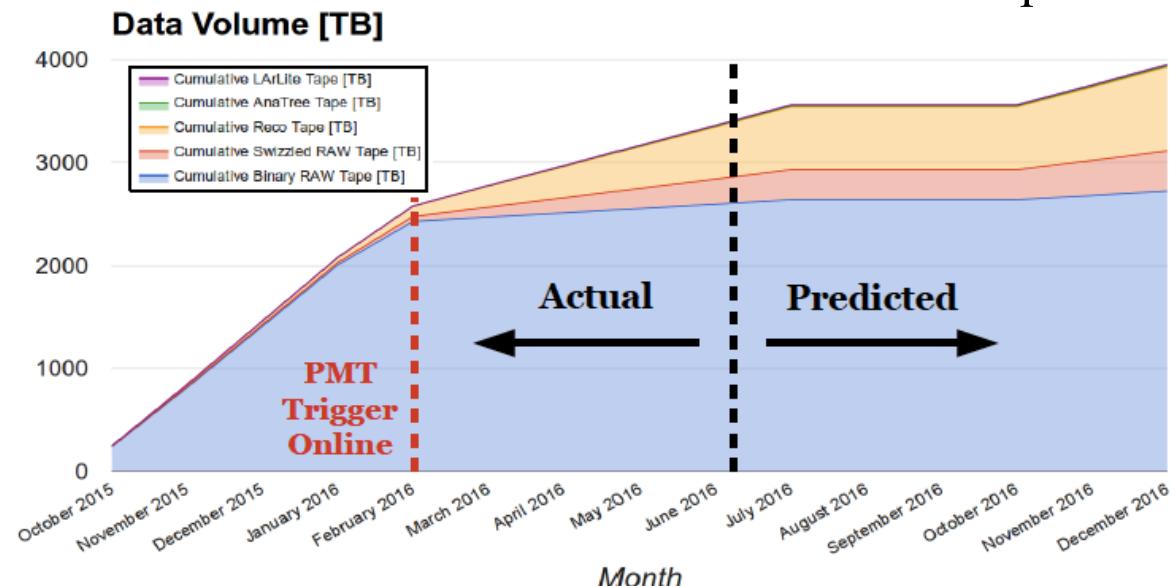

Data volume
before and after
PMT trigger
implementation.

High single PE rate
still not
understood...

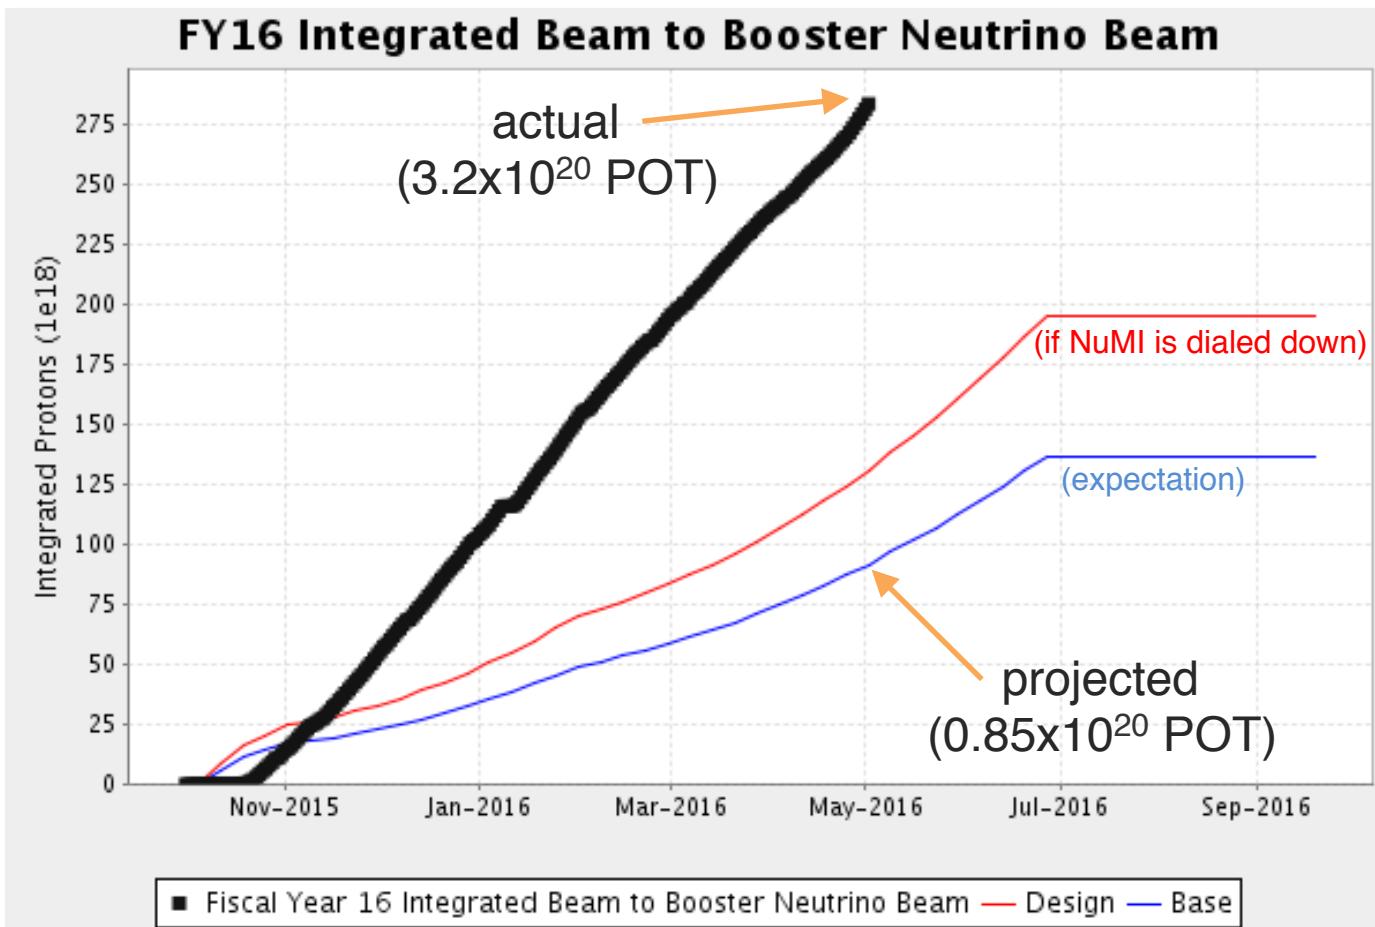

- DAQ performed well on day one with high reliability ($> 95\%$)
- Very stable despite receiving $>$ 3 times expected data rate
- Computing Model Task force underway

Many thanks to SCD
for all their help!

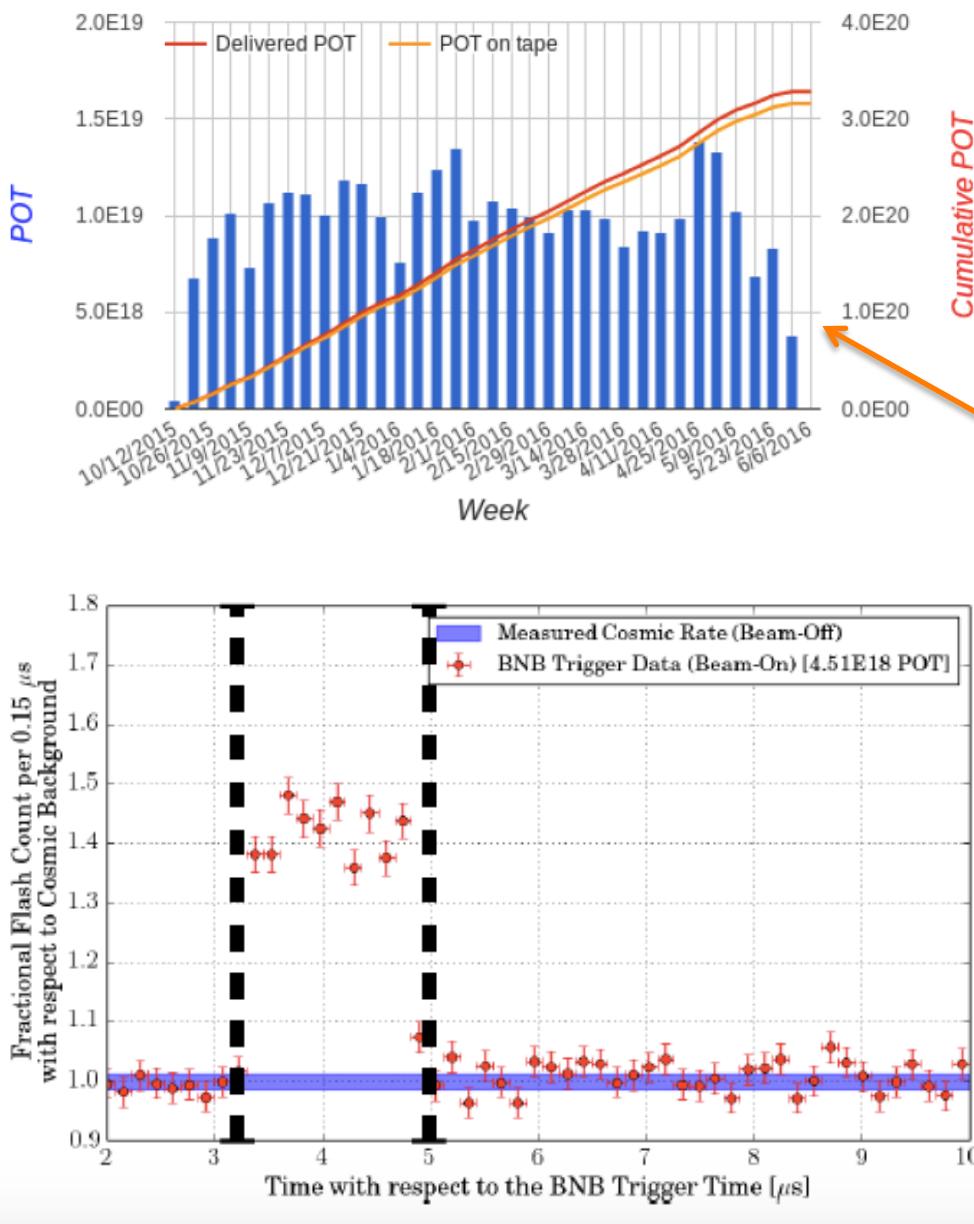

Beam to MicroBooNE

- FY16 saw the start of sustained 15 Hz Booster running with MicroBooNE as a direct benefactor. Many thanks to Accelerator Division!!!

- MicroBooNE has collected more than 3x the amount of neutrino beam expected from the BNB
- Horn #4 under construction
- Gates are being installed to allow BNB running when MI is down

Neutrinos to MicroBooNE

Since October, MicroBooNE has collected 3.2×10^{20} POT

45% of Run-I data set (pre-SBN)
97% written to tape
(combination of detector and DAQ uptime)

Recent downtime due to horn ground fault → now fixed...

Observe neutrinos in the beam window. Neutrino ID through fully automated event selection

- *MicroBooNE has had a very successful first 7 months of operations!*

First Analyses:

- Understand the detector
- Characterization of event classes (eg: π^0 's towards xsecs and oscillation analysis)
- Cross section analyses

Group Phase

1. An **internal Analysis Note** is prepared
2. An Editorial Board is formed (PC)
3. Presentation at a group meeting and circulation (after initial review and approval by the EB)
4. **1 week time for comments / questions**
5. Analysis team / EB handle comments with GC
If necessary, loop over 3, 4, 5
6. Approval by GC (in consultation with EB)

Collab. Phase

1. **2 weeks circulation** of the **internal Analysis Note** (by GC)
2. GC / Analysis team handle comments with EB
If necessary, recirculate
3. Approval by PC (in consultation with EB and GC)

Circulation times can be shortened in exceptional cases

Analysis and Publication Policy DocDB 3278

GC = Group Convener(s)
PC = Physics Coordinator(s) or Analysis Tools convener(s)
EB = Editorial Board

Making it public

Final results: **Publication** (Publications Committee)

Preliminary results:
Circulation of a **Public Note** (**with preliminary plots**) (Plots Policy, **1 week***)

* May overlap with the Collaboration internal analysis note circulation

Rigorous analysis process...

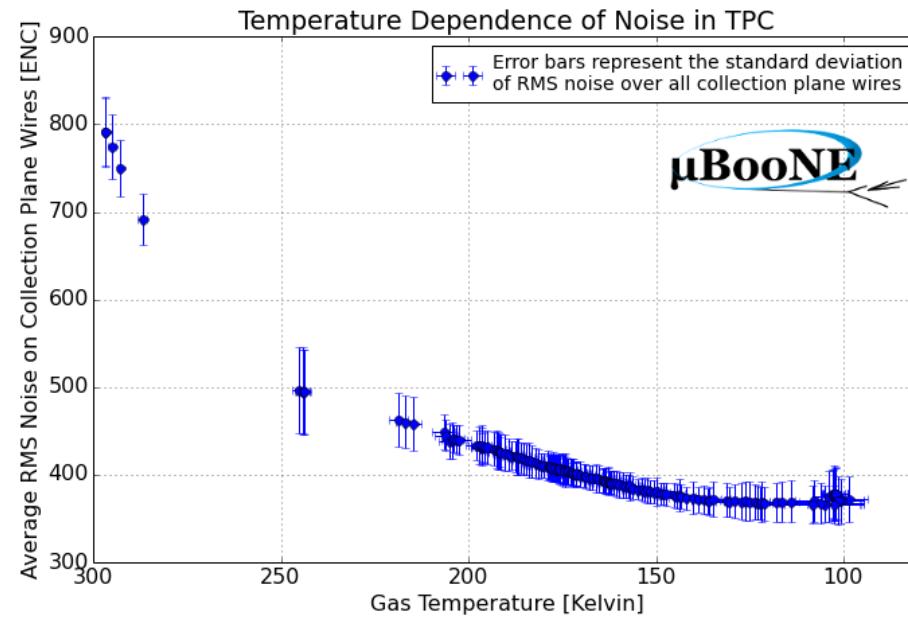

Completed Analyses with accompanying Public Notes:

| Active | Analysis | Group | Analysis Contact | EB | Date created | Internal note | Public Note / Publication |
|--------|--|-------------------------|-----------------------|------------------------|--------------|----------------------------|-----------------------------------|
| | Drift speed measurement with UV laser data (for APS) | Det. Phys. | Joseph Z. | Bruce B., Mike M. | Mar 2016 | DocDB-5509 | 1009 / DocDB-5509 |
| | Michel electron spectrum (for APS) | Det. Phys. | David C. | Gerry G., Roxanne G. | Feb 2016 | DocDB-5486 | 1008 / DocDB-5579 |
| | NC Pi0 event selection study (for APS 2016) | Xsec | Ryan G. | Leslie C., Jonathan A. | Feb 2016 | DocDB-5510 | 1006 / DocDB-5580 |
| | Cosmic ray studies in MicroBooNE | "Overburden" task force | Sowjanya G. | Georgia K., Donna N. | Dec 2015 | DocDB-4231 | 1005 / DocDB-5211 |
| | NumuCC inclusive cross section study based on simulation | Xsec | Anne S. | Xin Q., Mike S. | Oct 2015 | | 1004 / DocDB-4994 |
| | Electronegative concentration and electron lifetime | | Ben C., M. Zuckerbrot | Josh S, Brian R. | Sept 2015 | DocDB-4823 | 1003 / DocDB-4928 |
| | First neutrino events | Reco | Anne S., Andy F. | Dave S., Andrzej | Sept 2015 | DocDB-4874 | 1002 / DocDB-4903 |
| | Nucleon Decay | APE | Elena G. | Jen R., Eric C. | Aug 2015 | | DocDB-4765 |
| | Noise vs. Fill Level | Commissioning | David C. | Bryce L., Vittorio P. | July 2015 | | 1001 / DocDB-4717 |

Excellent performance of cold electronics!

Exhaustive investigation and mitigation of noise sources

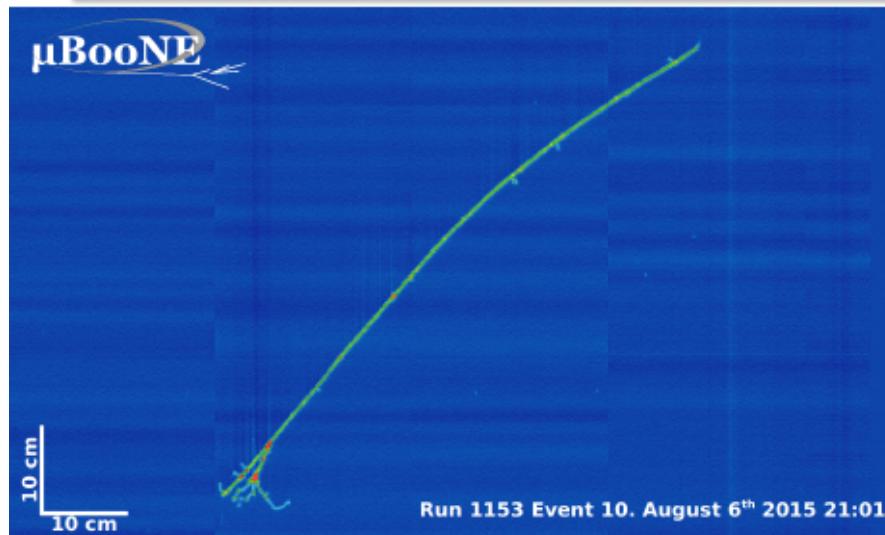

Software noise filtering further reduces noise effects

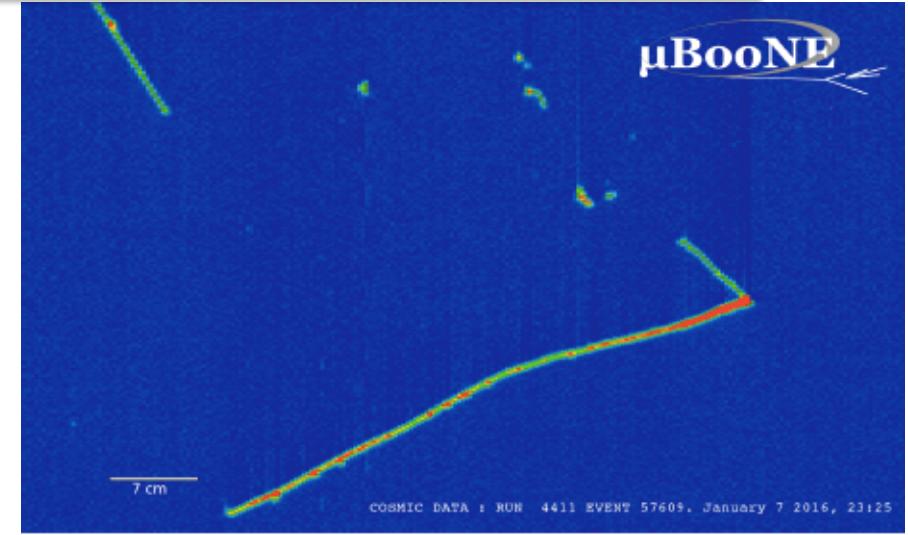

Without software noise filtering

With software noise filtering

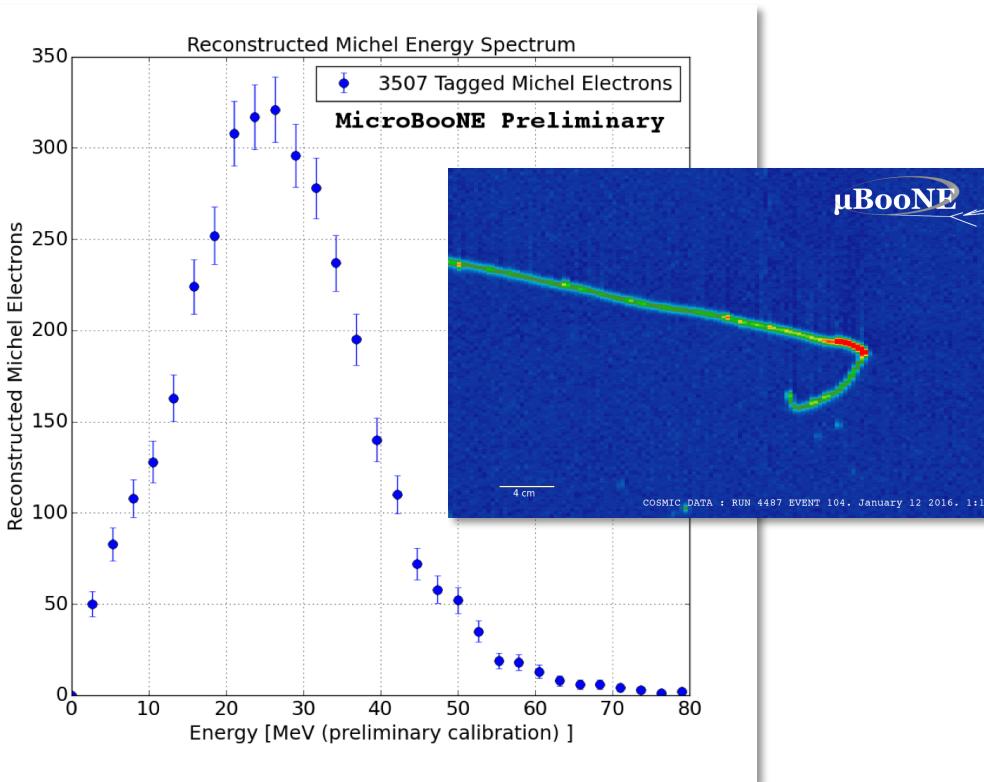

6/20/16

Fermilab PAC

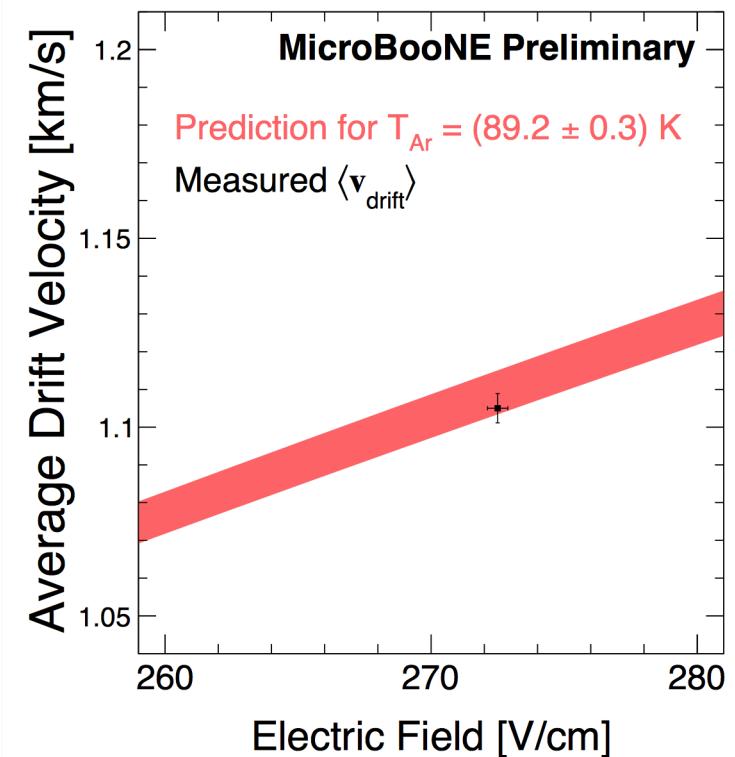

13

First Results from MicroBooNE

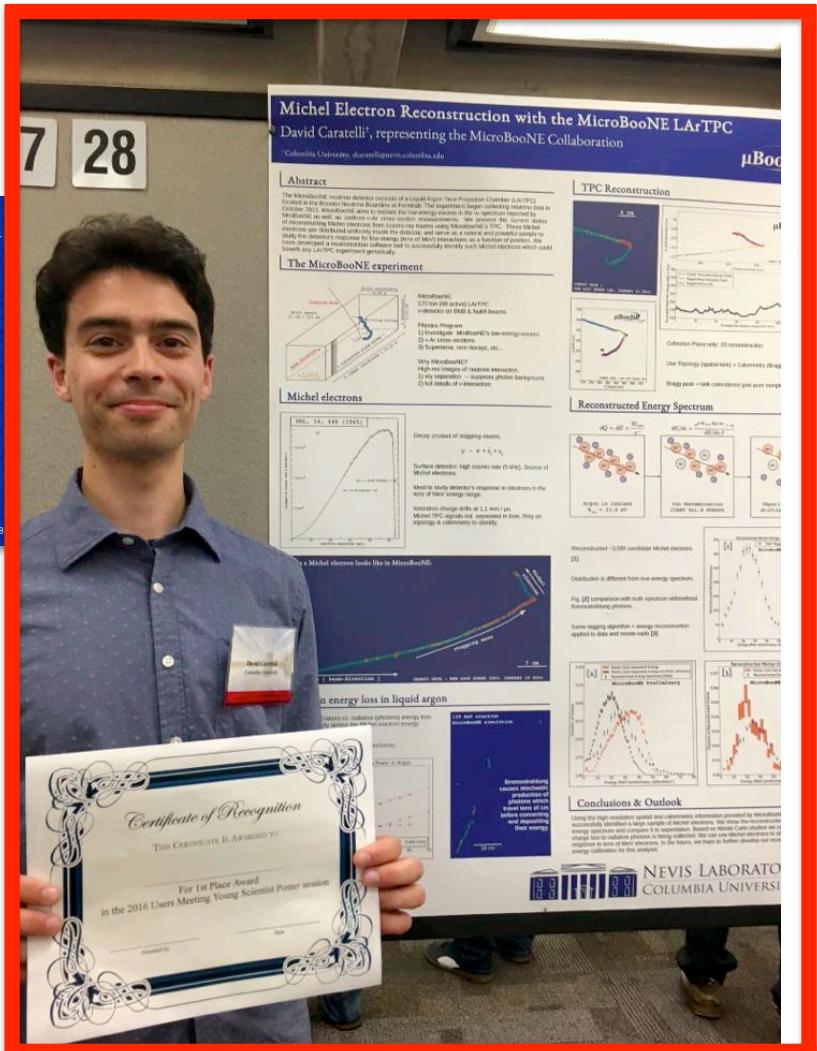

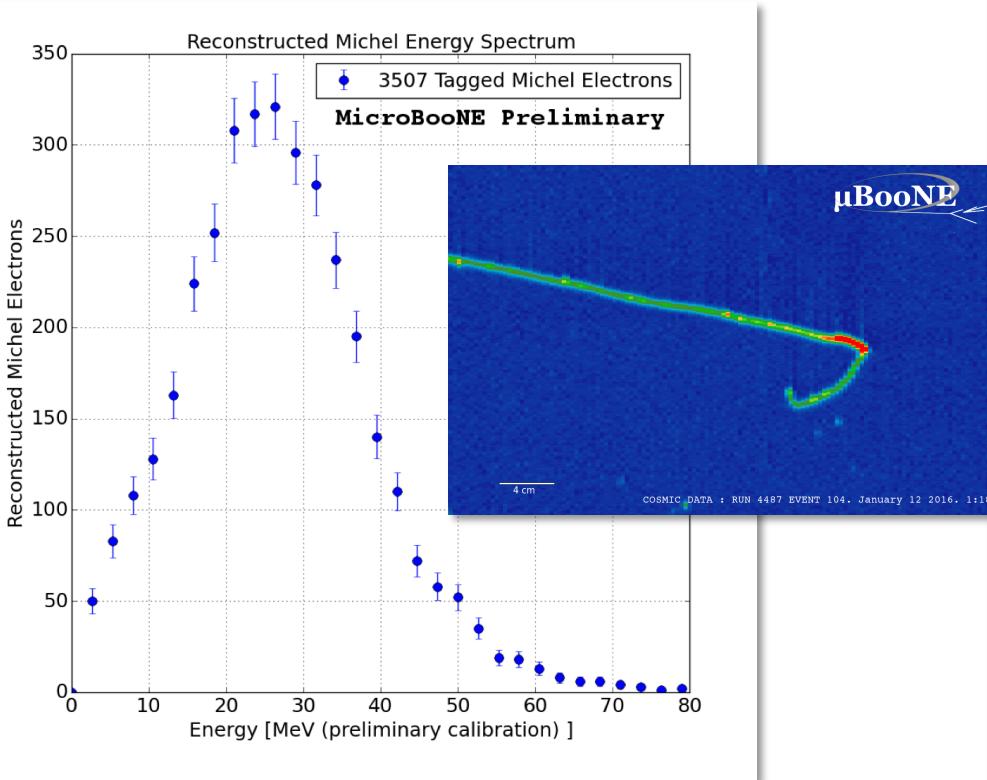

- Largest sample of Michel electrons ever collected in a LAr TPC
- Fully automated reconstruction

- Drift velocity measurement from UV laser data

First Results from MicroBooNE

MicroBooNE's David Caratelli wins first prize at the User's meeting poster contest for "Michel Electron Reconstruction with MicroBooNE"!

Reconstruction

- Reconstruction: pushing on all aspects of reconstruction with different approaches at each stage:
 - Tracking, vertexing, showering, calorimetry, particle ID, ...
 - Folding in calibrations: field response, space charge effects, electronics noise, non-responsive channels
 - Challenges: 2D → 3D, showering, ...
- Yearly Reconstruction workshop held this spring at UofM

Analyses in preparation for summer conferences → Neutrino 2016

(using 0.5E20 POT)

| Active | Analysis | Group | Analysis Contact | EB | Date created | Internal note | Public Note / Publication |

Technical Coordination:

- CRT installation
- Noise mitigation: Service Board replacement, HV filtering
- Raising Drift HV...
- Supernova Trigger implementation
- Purity Monitor replacement

Accelerator Division:

Beam Liaison
T. Kobilarcik

Communications Office:

Neutrino Outreach Group
J. Asaadi

Computing Sector:

Computing Sector Liaison
M. Kirby

ESH&Q:

Division Safety Officer (ND)
A. Aparicio

GENIE:

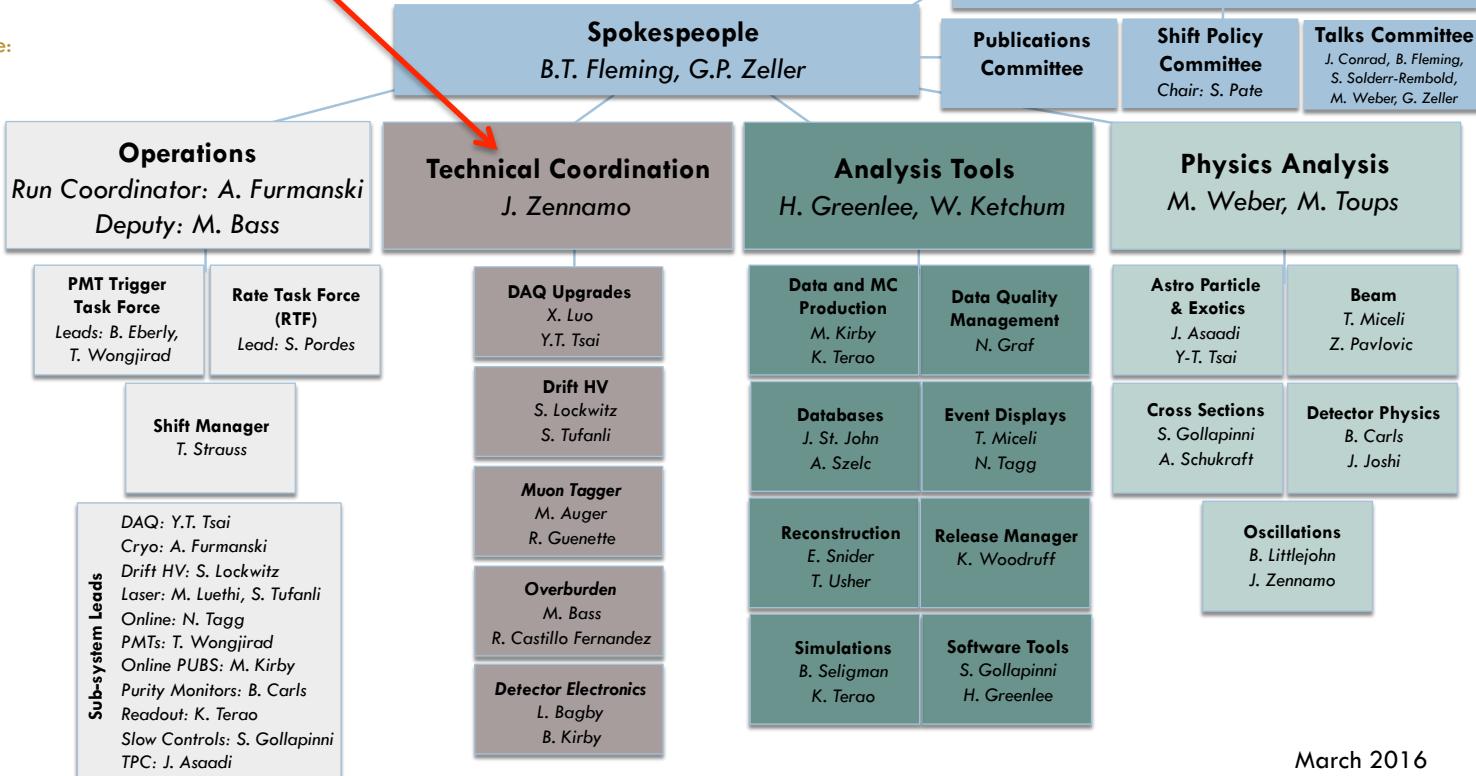

GENIE Liaison
S. Dytman

Neutrino Division:

Experimental Liaison Officer (ELO)
B. Lee
D. Torretta (deputy)

Cryogenics
B. Norris

MicroBooNE Organizational Chart

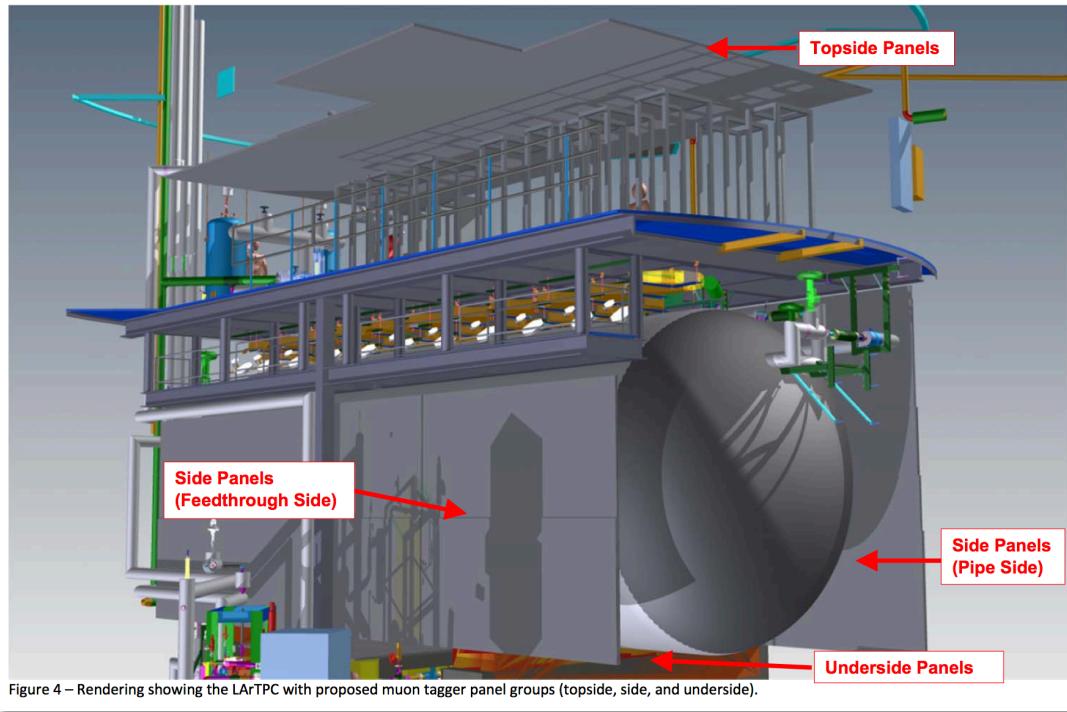

March 2016

uboone Technical Board chaired by Tim Bolton reviewing proposed shutdown activities

Cosmic Ray Tagger

- Reviewed by FNAL Neutrino Division
- Cost reduced substantially to <100k to lab for infrastructure (CRT detector: contribution from BERN)
- CRT panels under test at DAB
- Installation of bottom and side panels this shutdown
- Top panels in FY17

Elena Gramellini and Rui An
testing the CRT panels at DAB

MicroBooNE Collaboration

- 143 collaborators
 - 1/2 of the collaboration is students & postdocs (37 grad students, 36 Post-docs!)
- 28 institutions in 3 countries
- New institutions from cell division...

Postdoc Placement

- 20 of our postdocs have landed their next position;
- majority have remained on MicroBooNE (15/20)

- (1) Roxanne Guenette, Oxford, STFC Rutherford Fellow
- (2) David McKee, Missouri Southern State University, Assistant Professor
- (3) Mike Cooke, DOE, AAAS Science & Technology Policy Fellow
- (4) Teppei Katori, Queen Mary University of London, Lecturer
- (5) Georgia Karagiorgi, Manchester, Lecturer
- (6) Bryce Littlejohn, IIT, Assistant Professor
- (7) Tingjun Yang, FNAL, Applications Physicist, ND
- (8) Zarko Pavlovic, FNAL, Applications Physicist, ND
- (9) Andrzej Szelc, Manchester, Lecturer
- (10) Eric Church, PNNL, Scientist
- (11) Wes Ketchum, FNAL, Associate Scientist, SCD
- (12) Andy Blake, Lancaster, Lecturer
- (13) Josh Spitz, Michigan, Ann Arbor, Assistant Professor
- (14) Thomas Strauss, FNAL, Associate Scientist, TD
- (15) Matt Toups, Associate Scientist, ND
- (16) Jonathan Asaadi, UT Arlington, Assistant Professor
- (17) Leonidas Kalousis, Vrije Universiteit Brussel, Research Associate
- (18) Anne Schulkraft, Associate Scientist, ND
- (19) Sowjanya Gollapinni, University of Tennessee, Assistant Professor
- (20) Ben Carls, Fellowship, Insight Data Science

- 10 University
 - (5 non-U.S., 5 U.S.)
- 7 U.S. lab
- 1 U.S. government
- 1 second postdoc
- 1 Data Science

MicroBooNE and SBN/DUNE

Coherency with SBN and DUNE....

- SBN
 - Software, workshops, shared systems, talks
 - Combined science analyses
- DUNE: uboone “Public notes” can be prioritized at DUNE request.

Summary

- MicroBooNE is completing a very successful first 7 months!
 - Detector running well
 - Data collection $\rightarrow 3.2 \times 10^{20}$ POT so far
 - Aggressive program of data analysis
 - Part of broader SBN/DUNE program
