

# New Physics Searches with CMS

Jim Pivarski

*on behalf of the CMS Collaboration*

1 June, 2011

**We are still in the  
inflationary era  
of the LHC**

**It is *reasonable to  
believe* that a  
discovery is just  
beyond the next hill**

**This talk:** results from the 36-40  $\text{fb}^{-1}$  collected in 2010

## Explicit Models

- it's the physics we want to know
- easier to compare and combine with other experiments
- more limited scope

## Simplified Model Topologies

- broadly applicable limits set on particle kinematics
- interaction between theorists and experimentalists

## Experimental Signatures

- empirical: what was directly measured
- overall view of search program
- implications for physics less evident

## Explicit Models

- it's the physics we want to know
- easier to compare and combine with other experiments
- more limited scope

## Simplified Model Topologies

- broadly applicable limits set on particle kinematics
- interaction between theorists and experimentalists

## Experimental Signatures

- empirical: what was directly measured
- overall view of search program
- implications for physics less evident

► This talk is organized by experimental signature, for a broad overview

# Ways of presenting search results

Jim Pivarski 5/27

## Explicit Models

- it's the physics we want to know
- easier to compare and combine with other experiments
- more limited scope

## Simplified Model Topologies

- broadly applicable limits set on particle kinematics
- interaction between theorists and experimentalists

## Experimental Signatures

- empirical: what was directly measured
- overall view of search program
- implications for physics less evident

- ▶ This talk is organized by experimental signature, for a broad overview
- ▶ For most results, I will show a plot of the experimental channel and point to a paper reference for exact limits and analysis details

- ▶ Jets and MET
- ▶ Leptons
- ▶ Photons
- ▶ Cross-channels
- ▶ High-level objects ( $b$ -jets,  $\tau$ , and top)
- ▶ Weird stuff (e.g. new detector signatures)

Generic searches for  
hadronic resonances

dijet: [hep-ex/1010.0203](https://arxiv.org/abs/hep-ex/1010.0203)

►  $Z'$  or  $G^* \rightarrow q\bar{q}$

multijet: PAS EXO-11-001

► “quix” or RPV  $\tilde{g} \rightarrow qq\bar{q}$

**dijet mass**

**trijet mass**

# Jets: resonances

Jim Pivarski 8/27

Generic searches for  
hadronic resonances

dijet: [hep-ex/1010.0203](https://arxiv.org/abs/hep-ex/1010.0203)

►  $Z'$  or  $G^* \rightarrow q\bar{q}$

multijet: PAS EXO-11-001

► “quix” or RPV  $\tilde{g} \rightarrow qq\bar{q}$

dijet mass

trijet mass

## Dijet angular distributions

Centrality ratio

$$R_{\eta} = \frac{N_{jj}(|\eta| < 0.7)}{N_{jj}(0.7 < |\eta| < 1.3)}$$

New limits on quark  
compositeness:

$$\Lambda^+ > 5.6 \text{ TeV (destr.)}$$

$$\Lambda^- > 6.7 \text{ TeV (constr.)}$$

[hep-ex/1010.4439](https://arxiv.org/abs/hep-ex/1010.4439) and [hep-ex/1102.2020](https://arxiv.org/abs/hep-ex/1102.2020) (update)

# SUSY jets: special variables

Jim Pivarski 9/27

$\alpha_T = p_{T2}/M_T$  where  
 $p_{T2}$  is the  
second-highest jet  
momentum

Only events with real  
MET have  $\alpha_T > 0.55$

[hep-ex/1101.1628](https://arxiv.org/abs/hep-ex/1101.1628) and

PAS SUS-11-001

$H_T > 350$  GeV dijets

$H_T > 350$  GeV multijets

# SUSY jets: special variables

Jim Pivarski 10/27

$\alpha_T = p_{T2}/M_T$  where  $p_{T2}$  is the second-highest jet momentum

Only events with real MET have  $\alpha_T > 0.55$

[hep-ex/1101.1628](#) and [PAS SUS-11-001](#)

$H_T > 350$  GeV dijets

$H_T > 350$  GeV multijets

“Razor” analysis:

- interpret event as decay of two heavy objects:  $pp \rightarrow MM$
- split jet activity into hemispheres;  $M_R$  = hemisphere momentum in boosted frame
- $R = M_T^R/M_R$ , search in  $R > 0.5$

[PAS SUS-10-009](#)

- Inclusive search for new physics in  $\geq 3$  jets and missing energy (PAS SUS-10-005)
- Results expressed as limits on cMSSM and simplified models (below)
- Data file provided with acceptances, uncertainties, and limits as a function of simplified model particle masses

**gluino-like  
pair  
production**

**squark-like  
pair  
production**

- Dilepton resonances:  
several kinematic  
regions for searches

- Dilepton resonances:  
several kinematic  
regions for searches

- Other exotica searches
  - non-resonant dimuons:  
large extra dimensions  
PAS EXO-10-020
  - high muon multiplicity:  
lepton jets

- Dilepton resonances:  
several kinematic  
regions for searches

- Other exotica searches

- non-resonant dimuons:  
large extra dimensions  
[PAS EXO-10-020](#)
- high muon multiplicity:  
lepton jets

- SUSY searches

- single lepton [SUS-10-006](#)
- opp-sign dilepton [hep-ex/1103.1348](#)
- same-sign dilepton [hep-ex/1104.3168](#)
- $\geq 3$  leptons [SUS-10-008](#)

# Leptons: other resonances

$Z$  boson  $p_T$  spectrum:  
channel for generic  
neutral heavy-to-light  
decays, e.g.

$$q^* \rightarrow q Z$$

PAS EXO 10-025

Jim Pivarski 16/27

CMS Experiment at LHC, CERN  
Data recorded: Tue Oct 28 16:46:33 2010 CEST  
Run/Event: 149011 / 485253944  
Lumi section: 322

Dimuon Mass: 88.9 GeV/c<sup>2</sup>  
Dimuon  $P_T$ : 555.2 GeV/c

# Leptons: other resonances

$Z$  boson  $p_T$  spectrum:  
channel for generic  
neutral heavy-to-light  
decays, e.g.

$$q^* \rightarrow q Z$$

PAS EXO 10-025

Jim Pivarski 17/27

CMS Experiment at LHC, CERN  
Data recorded: Tue Oct 28 16:46:33 2010 CEST  
Run/Event: 146911 / 485253944  
Lumi section: 322

Dimuon Mass: 88.9 GeV/c²  
Dimuon P\_T: 555.2 GeV/c

Lepton jets: one or more low-mass, high- $p_T$   $\gamma_{dark} \rightarrow \ell\ell$  from a hidden sector

Left: high- $p_T$   
dimuons

Right: two  
dimuons per  
event

PAS EXO 11-013

$G^*$  resonance simulation

limits with data in PAS EXO 10-019

data with non-resonant Large Extra Dimensions prediction

# Stopped gluinos

Jim Pivarski 26/27

[hep-ex/1011.5861](https://arxiv.org/abs/hep-ex/1011.5861)

- ▶ Broad coverage of experimental signatures: the 2010 data were shaken through a tight sieve, searching for new physics
- ▶ CMS public results  
<https://twiki.cern.ch/twiki/bin/view/CMSPublic/PhysicsResults>
- ▶ LHC dataset is still growing exponentially: it is reasonable to believe that a dramatic discovery may be in store for us soon
