

High Energy Physics and Astrophysics

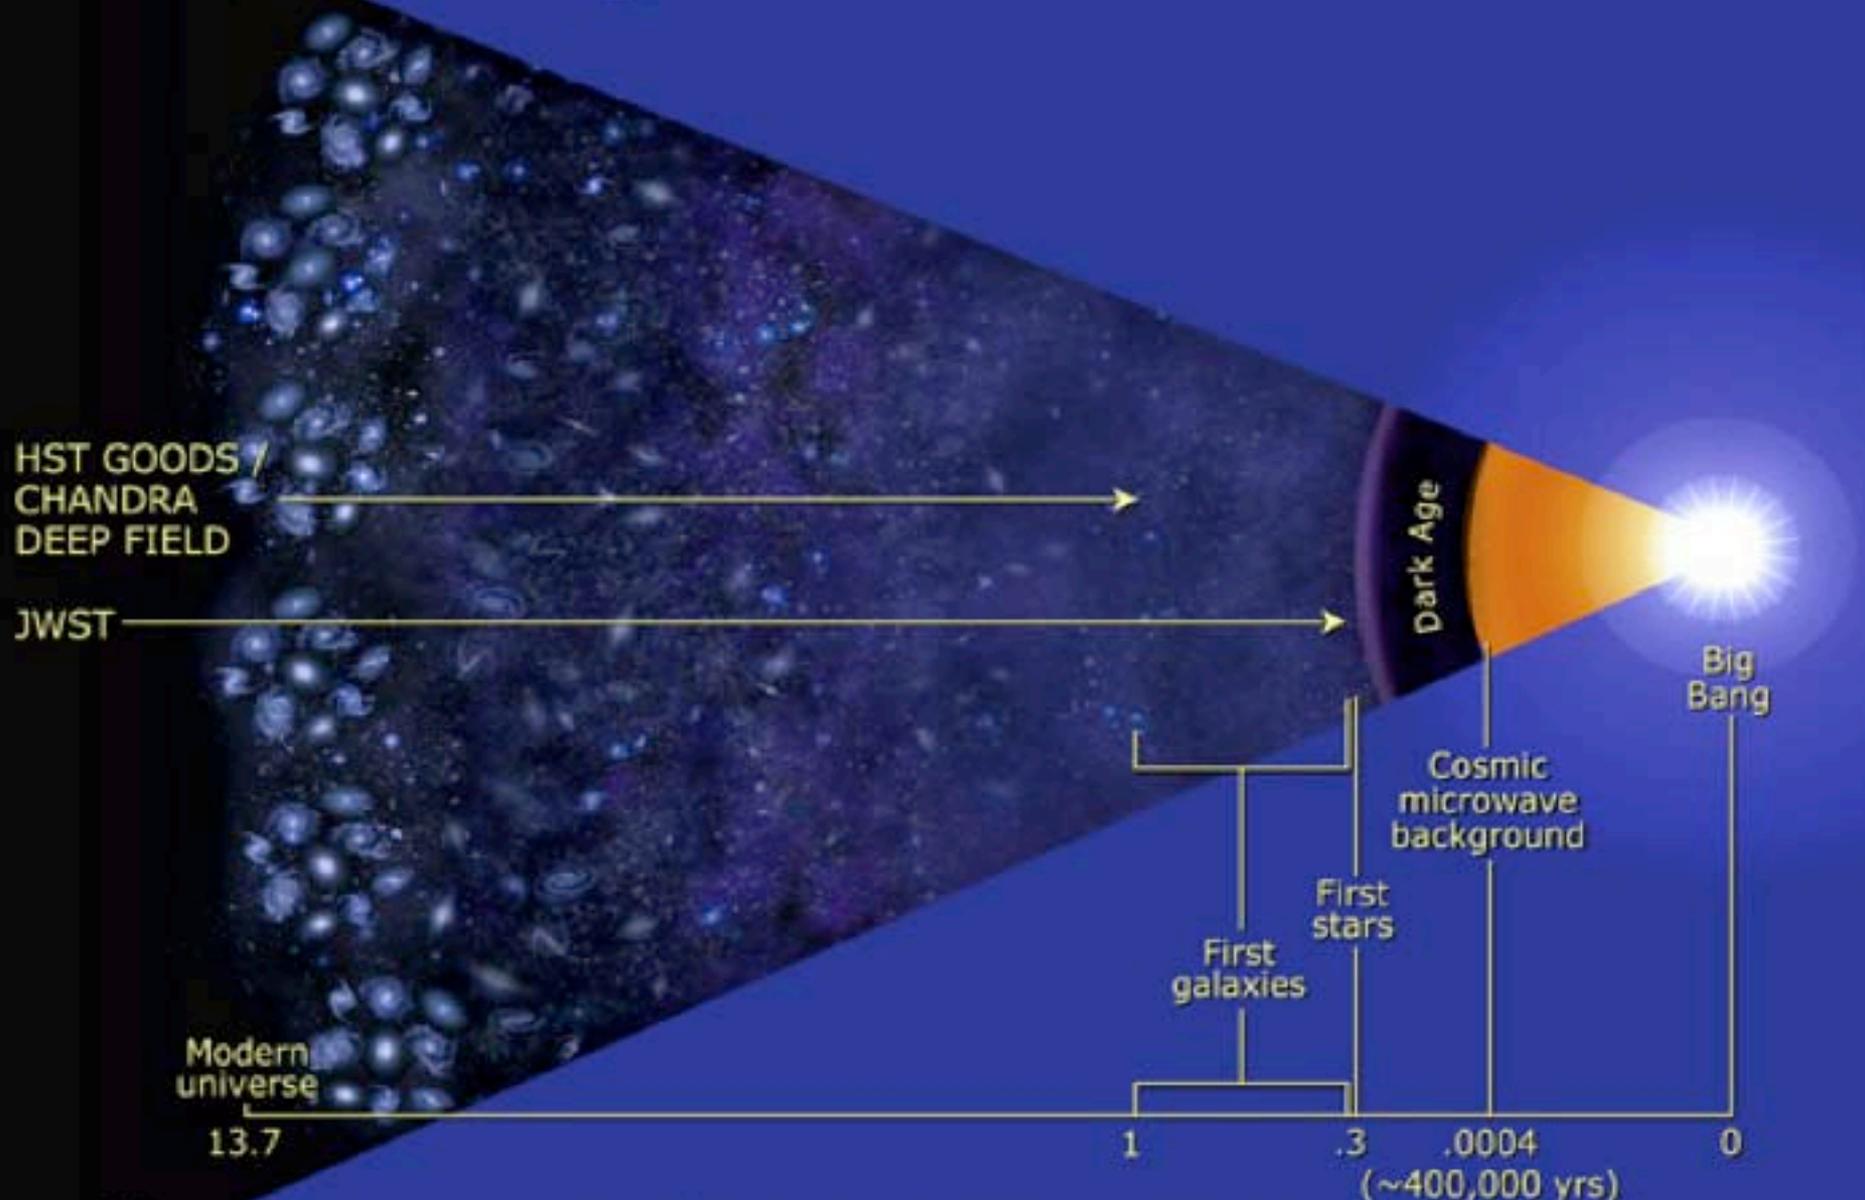

Angela V. Olinto (U. Chicago)
Chair of DAP of APS

APS Division of Astrophysics (DAP)

DAP strongly supports DPF's effort to organize the HEP community to identify:

- the next exciting Particle Physics questions and
- the projects to answer them

CONGRÈS INTERNATIONAL SUR LE RAYONNEMENT COSMIQUE
BAGNÈRES-DE-BIGORRE, 6-12 Juillet 1953

Photo ALIX

Louis Leprince-Ringuet

The congress of Bagnères de Bigorre sounded the death knell for cosmic rays and it was Powell himself who in his closing discourse had said "Gentleman, now we are invaded, we are submerged, these are the accelerators"

L. Leprince-Ringuet

J de Physique (Colloque #8) V 43 (1982)

38

Au Pic du Midi c'était Ch. Peyrou, B. Grégory, A. Lagarrigue, R. Armenteros, F. Muller puis A. Astier. Ont participé non seulement les français mais aussi des étrangers comme Ronald Rao de Princeton, Tinlot de Rochester, Destaebler de Mit et aussi B. Le Fretter, en partie. Vous savez ce qui a été étudié au Pic.

Le congrès de Bagnères de Bigorre en 1953, je dirais, a sonné le glas des rayons cosmiques et c'est Powell lui-même qui, dans son discours de clôture a dit : "Messieurs, maintenant nous sommes envahis, nous sommes submergés, ce sont les accélérateurs". Effectivement, la plupart des laboratoires de rayons cosmiques dont le nôtre, ici à l'Ecole Polytechnique, puis au Collège de France, se sont orientés vers les grands accélérateurs de particules et je voudrais vous dire aussi que le mot hypéron a été annoncé pour la première fois au congrès de Bagnères. Il y avait B. Rossi, E. Amaldi, C. Powell. Et on s'est demandé comment appeler ces nouvelles particules qui s'arrêtaient, qui étaient lourdes et qui donnaient un méson. Alors on a proposé divers noms. Et je dois dire que c'est ma principale contribution à la physique, j'ai prononcé le mot hypéron : le mot hypéron n'a pas été bien accueilli par Rossi. Rossi a dit "oh, hypéron, piperone, ça va pas". Et au contraire Powell était là et a dit "oh hypéron (prononcer haiperon) marvelous". Et on a adopté le mot hypéron. Et il a à Bagnères de Bigorre l'avenue de l'hypéron : c'est peut être le seul endroit au monde où une particule fondamentale a donné un nom à une avenue.

Cosmic Frontier Instrumentation

● UHE-CR

- Low rates at high energy
- R&D: Radio Detection, detection of air shower from space

● UHE-neutrinos

- R&D: Need development of new antennas, low noise amplifiers for detection of Cherenkov radio emission

● Gamma rays

- R&D: Cherenkov and water tank arrays, Low-cost photosensors/low-power digitizers
- Distributed timing across large arrays

● Dark Energy

- R&D path: Low-resolution spectroscopy and spectroscopic capability to wide field optical surveys

● Dark Matter

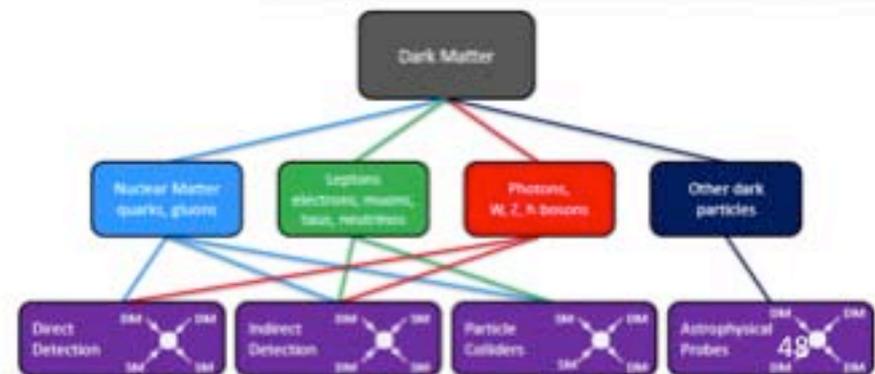

- Large program looking for larger mass, lower thresholds and directionality

● CMB

- R&D path towards readout of large cryogenic multi-choric arrays
