OSG-Flocking

All access operates under the OSG VO using glideinWMS

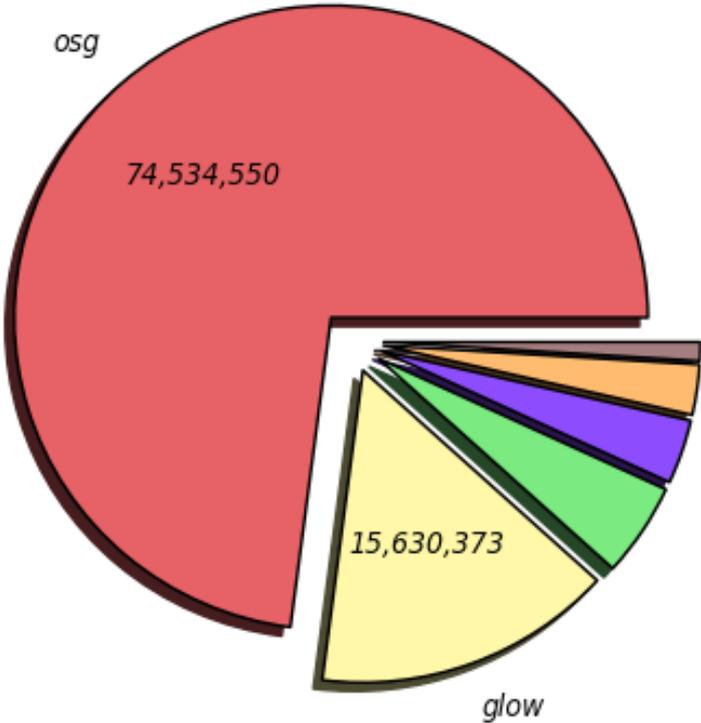

New Hardware / OS Update

- 32 cores / 164 GB RAM
- 10 Gb uplink
- 15 TB local scratch, RAID 10 over 24 disks, XFS
- CentOS 6, HTCondor 8.2, other software upgrades
- Branding: xd-login.opensciencegrid.org

Opportunistic VOs 10/1/13-9/30/14

Wall Hours by VO (Sum: 102,170,723 Hours)
53 Weeks from Week 39 of 2013 to Week 39 of 2014

OSG VO Scope & Usage

The OSG VO does not own any computing resources and only exists to harvest unused cycles at OSG sites (Opportunistic cycles) and make them available to researchers who are not already affiliated with an OSG VO.

For the 12 months ending 30-Sep-2014, the OSG VO harvested 74.5M hours (from sites by using gWMS) and delivered them to various submit hosts to enable the computing of researchers

Submit Host	Wall Hours
XD-Login (XD and OSG Direct)**	66,552,967
OSG-CONNECT **	3,800,930
BakerLab	1,399,444
ISI	46,370
LSU	60

** Core OSG Services

Tracking Allocations

- Problem: How do we, ahead of time, know that an allocation is about to expire and encourage the user to submit a research allocation request?
- Research allocations can only be submitted 4 times a year, and takes time to peer review and get set up.
- We have started to track active allocations on a monthly basis. Information is gathered from Gratia, XSEDE allocation database, and the OSG-XD submit host. This is a fairly manual task, but allows us to evaluate expiration dates and usage.

Communication Improvements

- **New announcement mailing list**
 - Users are added automatically when the system account is set up
 - Welcome email with support information

- **Identify projects which are making slow progress, or have end of allocations coming up**
 - Email and phone
